Student Exploration: Estimating Population Size

Vocabulary: percent error, population, sample

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. A jar contains 100 marbles total. Some are black. If you pull 4 marbles out and 1 is black, how many out of the 100 marbles would you guess are black? _____ Explain. _____

I would guess that 25 marbles out of the 100 are black because from the sample $\frac{1}{4}$ or a quarter was black out of the 4 marbles sample.

2. A different jar has 100 black marbles. (The total number of marbles is unknown.) If you pull 4 marbles out and 1 is black, what is your guess for the total number of marbles? _____ Explain. _____

I would guess that the total number of marbles is 400 since the estimated black marble data is 25%. Based on knowing it is 25%, we can find the total number by multiplying total number of 100 black marbles by 4 since it is the same ratio between number of black marbles to total.

Gizmo Warm-up

In the *Estimating Population Size* Gizmo, you will estimate the total number of fish in a pond. You will do this by tagging and releasing a certain number of fish, and then "recapturing" some.

To change the number of fish to tag or catch, drag the slider, or click on the number in the text field next to a slider, type a new value, and hit **Enter**.

1. Suppose a scientist tags 100 fish, and releases them. (Set the **Tagged fish in pond** to 100 to show this.) Later, a fisherman catches 50 fish from the same pond. (Set **Fish to catch** to 50 to show this.) The fisherman's catch is a **sample** of all fish in the pond.

Estimating the Undocumented Population: A “Grouped Answers” Approach to Surveying Foreign-Born Respondents, **Tools and Methods for Estimating Populations at Risk from Natural Disasters and Complex Humanitarian Crises** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Effective Use of Data, Methodologies, and Technologies to Estimate Subnational Populations at Risk, 2007-07-01 Worldwide millions of people are displaced annually because of natural or industrial disasters or social upheaval. Reliable data on the numbers, characteristics, and locations of these populations can bolster humanitarian relief efforts and recovery programs. Using sound methods for estimating population numbers and characteristics is important for both industrialized and developing nations. Ensuring that the data are geographically referenced for projection onto maps is essential. However, good data alone are insufficient. Adequate staff training and strong organizational and political desire to maintain and use the information are also required. **Tools and Methods for Estimating Populations at Risk from Natural Disasters and Complex Humanitarian Crises** reviews the main methods and tools for making estimates of subnational populations and makes several recommendations to improve the collection and the use of population data for emergency response and development. **Research Methods for Leisure, Recreation and Tourism, 2nd Edition** Ercan Sirakaya-Turk, Muzaffer Uysal, William E. Hammitt, Jerry J. Vaske, 2017-04-13 Describing the fundamental elements of research methods for leisure, recreation, and tourism, this new edition of a popular textbook is updated throughout. It covers the measurement of variables, sampling, questionnaire design, and evaluation methods, and also a wider discussion of writing proposals, communicating research findings, cross-cultural research, and the use of new technologies in conducting research. Written by internationally renowned researchers in an accessible style, this book introduces both undergraduate and graduate students to the vital skills they will need to succeed in the leisure, recreation, tourism, and hospitality industries. *The Heinemann Science Scheme* Ian Bradley, Peter Gale, Mark Winterbottom, 2001 The Heinemann Science Scheme offers an approach to the QCA's Scheme of Work. Teacher's resource packs provide support with lesson planning, with each chapter matching the Scheme of Work and including built-in assessment. The scheme aims to improve on the Scheme of Work by building in progression and a comprehensive revision programme to help prepare pupils for their National Tests. It also aims to make the Scheme of Work accessible to all pupils. The scheme builds on what students already know, following on from the Scheme of Work at Key Stages 1 and 2. It takes into account what pupils already know at the start of Key Stage 3 and builds from there. The Heinemann Science Scheme is also designed to build on the literacy and numeracy work pupils have done in primary schools. Introductory Biological Statistics John E. Havel, Raymond E. Population Cycles Alan Andrew Berryman,2002 For over sixty years understanding the causes of multiannual cycles in animal populations has been a central issue in ecology This book brings together ten of the leaders in this field to examine the major hypotheses and recent evidence in the field and to establish that trophic interactions are an important factor in driving at least some of the major regular oscillations in animal populations that have long puzzled ecologists

Conservation Biology Scott P. Carroll,Charles W. Fox,2008-09-15 The main goal of this book is to encourage and formalize the infusion of evolutionary thinking into mainstream conservation biology It reviews the evolutionary foundations of conservation issues and unifies conceptual and empirical advances in evolutionary conservation biology The book can be used either as a primary textbook or as a supplementary reading in an advanced undergraduate or graduate level course likely to be called Conservation Biology or in some cases Evolutionary Ecology The focus of chapters is on current concepts in evolution as they pertain to conservation and the empirical study of these concepts The balanced treatment avoids exhaustive reviews and overlapping duplication among the chapters Little background in genetics is assumed of the reader

The Methods and Materials of Demography Henry S. Shryock,2013-10-22 Like the original two volume work this work attempts to present a systematic and comprehensive exposition with illustrations of the methods used by technicians and research workers in dealing with demographic data The book is concerned with how data on population are gathered classified and treated to produce tabulations and various summarizing measures that reveal the significant aspects of the composition and dynamics of populations It sets forth the sources limitations underlying definitions and bases of classification as well as the techniques and methods that have been developed for summarizing and analyzing the data

Ecological Methodology Charles J. Krebs,1999 This coherent text translates the methods of statisticians into ecological English so that students may readily apply these methods to the real world Ecological Methodology Second Edition provides a balance of material on animal and plant populations It teaches students of ecology how to design the most efficient tests in order to obtain maximum precision with minimal work The first part of the text focuses on biological and technical issues in statistical methodology Students learn about advances that have been made in designing better sampling

devices along with the techniques and equipment used for sampling The second part deals with creating solid statistical design and presents all methods that are well known to statisticians in a language and context that students will easily understand

Evolution and Selection of Quantitative Traits Bruce Walsh, Michael Lynch, 2018-06-21 Quantitative traits be they morphological or physiological characters aspects of behavior or genome level features such as the amount of RNA or protein expression for a specific gene usually show considerable variation within and among populations Quantitative genetics also referred to as the genetics of complex traits is the study of such characters and is based on mathematical models of evolution in which many genes influence the trait and in which non genetic factors may also be important Evolution and Selection of Quantitative Traits presents a holistic treatment of the subject showing the interplay between theory and data with extensive discussions on statistical issues relating to the estimation of the biologically relevant parameters for these models Quantitative genetics is viewed as the bridge between complex mathematical models of trait evolution and real world data and the authors have clearly framed their treatment as such This is the second volume in a planned trilogy that summarizes the modern field of quantitative genetics informed by empirical observations from wide ranging fields agriculture evolution ecology and human biology as well as population genetics statistical theory mathematical modeling genetics and genomics Whilst volume 1 1998 dealt with the genetics of such traits the main focus of volume 2 is on their evolution with a special emphasis on detecting selection ranging from the use of genomic and historical data through to ecological field data and examining its consequences
