**On Filtered Binary Processes** R. F. Pawula, S. O. Rice, RANDOM APPLICATIONS INC MONTROSE CO., 1984 The problem of calculating the probability density function of the output of an RC filter driven by a binary random process with intervals generated by an equilibrium renewal process is studied New integral equations closely related to McFadden's original integral equations are derived and solved by a matrix approximation method and by iteration Transformations of the integral equations into differential equations are being investigated Some numerical results which compare the matrix and iteration solutions with both exact solutions and approximate solutions based upon the Fokker Planck equation are presented Author
