Points of Distribution . Points of Distribution are centralized locations where the public picks up life sustaining commodities following a disaster or emergency . Commodities usually include shelf stable food and water What are Points of Distribution or PODs? During a disaster, one method of issuing supplies may not be enough. A Local Emergency Management Agency (LEMA) could use other distribution systems or use all of them at once. All three complement each other and provide expanded distribution coverage. For this Guide, we will focus on Points of Distribution or PODs. PODs can accommodate vehicle traffic (drive-thru), pedestrian traffic (walk thru), and mass transit traffic (bus or rail). Each person or vehicle receives a set amount of supplies. The recommended amount is for each person/vehicle to receive enough for a household of three. The amount of supplies provided will differ depending on the type of transportation used. For instance, more supplies are provided to someone in a car than to a pedestrian who must hand carry items." CEUs 0.3 Today's advanced practice registered nursing and physician assistant programs have been allocating less time to the study of neurology, leaving new practitioners with an uncertain grasp of how to approach the neurological patient. Here is a "how to" manual for knowledgeably conducting the basic neurological examination and confidently applying exam findings to the interpretation of common neurological symptoms. It explains all facets of the

standard neuro exam that is conducted in clinical and hospital settings and includes an abundance of photos, illustrations, and useful algorithms. The book examines how to use the exam results to determine a likely diagnosis or to identify an area of concern for further diagnostic tests. The text presents both basic and advanced concepts related to the exam to foster a deeper understanding of the meaning and physiology underlying an abnormal finding. Step by step, the text describes how to conduct the exam and provides photos, illustrations, and diagrammatic representations of examination steps and concepts. Algorithms bring a logical problem-solving approach to clinical thinking, and reference tables provide information at a glance for the busy practitioner. The book will be beneficial both for new practitioners who seek mastery of neurology fundamentals and a solid understanding of exam findings, as well as for those who have mastered the fundamentals and wish to gain more sophisticated diagnostic skills in order to accurately analyze the meaning of each symptom in the broader context of neurological practice. Key Features: Presents a clear, step-by-step description of how to conduct a neurological examination and apply findings in the clinical setting Addresses the needs of both new and seasoned practitioners Provides a wealth of illustrations and diagrams to reinforce concepts Uses algorithms to enhance a logical problem-solving approach Includes quick reference tables for the busy practitioner Alexandra Armitage, MS, APRN, CNL, is a clinical practitioner who has worked and taught in various clinical and educational neurological and neurosurgical settings.

She received her BS from the University of Natal, South Africa, and her MS and post-master's APRN certificate from the University of New Hampshire. She is currently working as a provider at Neurosurgery of Southern New Hampshire in Nashua, New Hampshire. She has given numerous neurology and neurosurgical lectures to both nursing and nurse practitioner students and is keenly interested in advancing the neurological knowledge of all nurses. In addition, she is the book reviewer for the New Hampshire Nurse's Association. She is a member of Sigma Theta Tau and the American Academy of Neurology.

ICS 100, Introduction to the Incident Command System, introduces the Incident Command System (ICS) and provides the foundation for higher level ICS

training. This course describes the history, features and principles, and organizational structure of the Incident Command System. This manual, the Federal Emergency Management Agency FEMA National Incident Management System Third Edition October 2017, provides a common, nationwide approach to enable the whole community to work together to manage all threats and hazards. NIMS applies to all incidents, regardless of cause, size, location, or complexity. Communities across the Nation experience a diverse set of threats, hazards, and events. The size, frequency, complexity, and scope of these incidents<sup>1</sup> vary, but all involve a range of personnel and organizations to coordinate efforts to save lives, stabilize the incident, and protect property and the environment. Every day, jurisdictions and organizations work together to share resources, integrate tactics, and act collaboratively. Whether these organizations are nearby or are supporting each other from across the country, their success depends on a common, interoperable approach to sharing resources, coordinating and managing incidents, and communicating information. The National Incident Management System (NIMS) defines this comprehensive approach. NIMS guides all levels of government, nongovernmental organizations (NGO), and the private sector to work together to prevent, protect against, mitigate, respond to, and recover from incidents. NIMS provides stakeholders across the whole community<sup>2</sup> with the shared vocabulary, systems, and processes to successfully deliver the capabilities described in the National Preparedness System.<sup>3</sup> NIMS defines operational systems, including the Incident

Command System (ICS), Emergency Operations Center (EOC) structures, and Multiagency Coordination Groups (MAC Groups) that guide how personnel work together during incidents. NIMS applies to all incidents, from traffic accidents to major disasters. The jurisdictions and organizations involved in managing incidents vary in their authorities, management structures, communication capabilities and protocols, and many other factors. NIMS provides a common framework to integrate these diverse capabilities and achieve common goals. The guidance contained in this document incorporates solutions developed over decades of experience by incident personnel across the Nation.

**Course Overview** This independent study course prepares students to successfully assume the role and responsibilities of a Geospatial Information System (GIS) Specialist during a disaster situation. As they complete this course, students will learn how to use their GIS skills to support other members of a Joint Field Office (JFO) disaster response and recovery team and successfully meet the responsibilities assigned to them. Students will also learn what types of products need to be produced and what procedures must be followed to ensure that products are produced correctly and in a timely manner.

**Course Objectives:**

- Recognize the role a GIS Specialist performs while supporting a response and recovery operation
- Identify likely sources of information and data within FEMA and the emergency management community
- Identify the types of products commonly needed by FEMA programs and decision makers during an operation
- Recognize best practices for establishing and maintaining data

flow, products and timelines during an incident

- Recognize how to appropriately handle and protect licensed, sensitive, or personal data
- Recognize how to use Remote Sensing products

Primary Audience This course is designed primarily for GIS Specialists newly employed with FEMA or other emergency response organizations. Students should already have a basic working knowledge of standard GIS software applications. Prerequisites Prior to completing this course, it is highly recommended that the student have:

- Opened the Geospatial Information System Specialist (GISP) task book, or
- Held the equivalent position in the NRCC/RRCC (when developed)

Students must also have basic geospatial knowledge and skills, including:

- Knowledge of how to make a map and other geospatial products
- Knowledge of basic analytics
- Knowledge of the basic fundamentals of cartography and geospatial terminology
- The ability to use standard GIS software and equipment such as:
  - ESRI's ArcGIS software, including Spatial Analyst
  - Adobe products
  - Google Earth
  - Large format printers
  - Microsoft Office suite
  - Handheld GPS devices
  - Modeling and decision support software such as HAZUS
- Computers

Note: Students may come to FEMA with prior geospatial training and knowledge, or it may be developed through on-the-job training or courses.
