[The Chicago Plan Revisited](#) Mr.Jaromir Benes,Mr.Michael Kumhof,2012-08-01 At the height of the Great Depression a number of leading U S economists advanced a proposal for monetary reform that became known as the Chicago Plan It envisaged the separation of the monetary and credit functions of the banking system by requiring 100% reserve backing for deposits Irving Fisher 1936 claimed the following advantages for this plan 1 Much better control of a major source of business cycle fluctuations sudden increases and contractions of bank credit and of the supply of bank created money 2 Complete elimination of bank runs 3 Dramatic reduction of the net public debt 4 Dramatic reduction of private debt as money creation no longer requires simultaneous debt creation We study these claims by embedding a comprehensive and carefully calibrated model of the banking system in a DSGE model of the U S economy We find support for all four of Fisher s claims Furthermore output gains

approach 10 percent and steady state inflation can drop to zero without posing problems for the conduct of monetary policy
