Have Americans been conned by the health-food industry into taking vitamins they don't need? Two distinguished physicians say yes! Drs. Stephen Barrett and Victor Herbert present a detailed and comprehensive picture of the multibillion-dollar health-food industry, which, they charge, has amassed its huge fortunes mostly by preying on the fears of uninformed consumers. Based on twenty years of research, *The Vitamin Pushers* addresses every aspect of this lucrative business and exposes its widespread misinformation campaign. The authors reveal how many health-food companies make false claims about products or services, promote unscientific nutrition practices through the media, show little or no regard for the rules of scientific testing and evidence, and often skirt the law in their schemes for making quick profits while eluding government watchdog agencies. Drs. Barrett and Herbert counter the phony assertions of health-food hucksters with reliable, scientifically based nutrition information, and they suggest how the consumer can avoid "getting quacked". They also include five useful appendices on balancing your diet, evaluating claims made for more than sixty supplements and food products, and much more. *The Vitamin Pushers* is a much-needed expose of a nationwide scam, which will definitely save you money and might even save your life. Create your own robots, toys, remote controllers, alarms, detectors, and more with the Arduino device. This simple microcontroller has become popular for building a variety of objects that interact with the physical world. These recipes provide solutions for the most common problems and questions Arduino users have. *Beginning Sensor Networks with Arduino and Raspberry Pi* teaches you how to build sensor networks with Arduino, Raspberry Pi, and XBee radio modules, and even shows you how to turn your Raspberry Pi into a MySQL database server to store your sensor data! First you'll learn about the different types of sensors and sensor networks, including how to build a simple XBee network. Then you'll walk through building an Arduino-based temperature sensor and data collector, followed by building a Raspberry Pi-based sensor node. Next you'll learn different ways to store sensor data, including writing to an SD card, sending data to the cloud, and setting up a Raspberry Pi MySQL server to host your data. You even learn how to connect to and interact with a MySQL database server directly from an Arduino! Finally you'll learn how to put it all together by connecting your Arduino sensor node to your new Raspberry Pi database server. If you want to see how well Arduino and Raspberry Pi can get along, especially to create a sensor network, then *Beginning Sensor Networks with Arduino and Raspberry Pi* is just the book you need. The student is trained, from the first, to read "unvocalized" script as the native reader does, and "reading clues" (word and phrase patterns) are provided for this purpose. The work is organized into sections that can be worked through in an academic year—presentation of features, text samples, exercises, grammatical synopses, and individual and comprehensive glossaries. This text may be used by teachers without specialized training in linguistics. It can be used by self-teaching students as well as by those at college level, and it will be valuable for immigrants to Israel. *APLS: The Pediatric Emergency Medicine Resource, Revised Fourth Edition* offers the information necessary to assess and manage critically ill or injured children during the first hours in the emergency department. No detailed description available for "American Universities and Colleges". "In this magnificent book, Oliver Schuchard provides more than sixty-five exquisite black-and-white photographs spanning his thirty-eight years of photography. In addition, he explains the aesthetic rationale and techniques he used in order to produce these photographs, emphasizing the profound differences between, yet necessary interdependence of, craft and content. Although Schuchard believes that craft is important, he maintains that the idea behind the photograph and the emotional content of the image are equally vital and are, in fact, functions of one another. The author also shares components of his life experience that he believes helped shape his development as an artist and a teacher. He chose the splendid photographs included in this book from among nearly 5,000 negatives that had been exposed all over the world, from Missouri to Maine, California, Alaska, Colorado, France, Newfoundland, and Hawaii, among many other locations. Approximately 250 negatives survived the initial review, and each of those was printed before a final decision was made on which photographs were to be featured in the book. The final choices are representative of Schuchard's work and serve to substantiate his belief that craft, concept, and self must be fully understood and carefully melded for a good photograph to occur. This amazing work by award-winning photographer Oliver Schuchard will be treasured by professional and amateur photographers alike, as well as by anyone who simply enjoys superb photography."--Publishers website.
