

What can be done about electromagnetic interference?

Electromagnetic compatibility, or EMC, is still a complete mystery to many in the wind turbine and power converters industry. Matthias Brück, Roxeltec, explains how EMC is a highly important aspect of electromagnetic interference, as the larger the converter, the more electromagnetic signals are released

Powerful transmitters, lightning strikes and circuit switching are typical causes of electromagnetic interference. The signals emitted by the power converters of a wind turbine, for example, can interfere with flight and marine radars, as well as wireless communication systems. Under certain conditions they can even cause interference within the wind turbine itself. The amount of power being converted dictates the amount of electromagnetic radiation, so interference from large wind turbines is, therefore, particularly high.

There are currently no laws that regulate standards for electromagnetic interference emissions from wind turbines. However, Technical Guideline 9 (TRG9), issued by the *Forschungsgesellschaft Windenergie (FGW)*, the German association for the development of wind energy, provides the industry with an important preventive aid. This association outlines a measurement procedure for wind turbines and solar energy facilities that operators can use to confirm that their plants are not sources of electrical noise. Manufacturers can reduce electromagnetic interference by designing EMC versions of

converter cabinets, and by using cable transits equipped with electromagnetic shielding. It is best to incorporate these modifications at the beginning, but converters can be retro-fitted, if needed. Cabinets must be built like Faraday cages so that interference is not released to the outside environment. The cabinet doors should be fitted with EMC conductive gasket and ventilation openings should be covered with honeycomb vents. The fine metal mesh weakens outgoing electromagnetic waves, which causes them to scatter. This scattering process, referred to as attenuation, causes frequencies to be dispersed. Cable entry seals with special EMC shielding, such as those manufactured by Roxeltec, can be used to combine efficient EMC shielding with, for example, an IP standard that prescribes water and gas tightness.

The task of the cable feedthrough is to absorb frequencies in order to keep them out of the facility and to protect the environment from interference. For this to happen, the frame of the transit must be made of a conductive material and be

grounded, and the cables themselves must be shielded with a conductive braid or covered with a conductive foil. Interference is thus absorbed by the cable shield and the feedthrough, and discharged through the grounded frame. Systems such as those from Roxeltec, which bundle several cables into a single frame and whose modules are divided, save space and are easy to install.

To determine the optimal EMC cable entry seal, the manufacturer or operator has to decide which frequency range requires attenuation and what level of attenuation must be achieved. Attenuation is measured in decibel units, whereby the decibels curve is exponential rather than linear. A three-decibel increase in attenuation doubles the attenuation of interfering frequencies, while an increase of 30 decibels increases attenuation by one thousand times. This means it takes relatively little effort to significantly improve attenuation.

It is also important to gain an overview of diverse EMC functions and products. For example, a Roxeltec cable entry seal labelled PE (potential equalisation) provides an important basic EMC function, namely potential equalisation. It protects susceptible electronic components against overvoltage, providing "inside" protection. At the same time, its foil also grounds any low frequency interference on the cable's shielding. A Roxeltec cable transit labelled BG (bonding and grounding) provides, in addition to potential equalisation and protection against conducted interference, a high current-carrying capacity and can divert short circuits or lightning strikes directly. This system is equipped with copper braid instead of foil and is very easy to install. Due to design both PE and BG products from Roxeltec have a much better high frequency performance than traditional grounding by wire, so called pigtails. This is critical in EMC applications.

A Roxeltec seal labelled ES (electromagnetic shielding) provides protection against both incoming and outgoing interference. Its conductive foil enables potential equalisation and offers protection against conducted interference, while a conductive barrier attenuates higher frequency interference in the atmosphere. This is how cell towers and radar units are protected against interference from signals emitted by converters.

Engineering Victory Thomas F. Army Jr., 2016-06-01 Superior engineering skills among Union soldiers helped ensure victory in the Civil War Engineering Victory brings a fresh approach to the question of why the North prevailed in the Civil War Historian Thomas F Army Jr identifies strength in engineering not superior military strategy or industrial advantage as the critical determining factor in the war s outcome Army finds that Union soldiers were able to apply scientific ingenuity and innovation to complex problems in a way that Confederate soldiers simply could not match Skilled Free State engineers who were trained during the antebellum period benefited from basic educational reforms the spread of informal educational practices and a culture that encouraged learning and innovation During the war their rapid construction and repair of roads railways and bridges allowed Northern troops to pass quickly through the forbidding terrain of the South as retreating and maneuvering Confederates struggled to cut supply lines and stop the Yankees from pressing any advantage By presenting detailed case studies from both theaters of the war Army clearly demonstrates how the soldiers education training and talents spelled the difference between success and failure victory and defeat He also reveals massive logistical operations as critical in determining the war s outcome

[Engineering Your Future](#) David Dowling, Roger Hadgraft, Anna Carew, Tim McCarthy, Doug Hargreaves, Caroline Baillie, Sally Male, 2024-12-31 The fifth edition of Engineering Your Future An Australasian Guide serves as a fundamental resource for first year engineering students across all disciplines within the Australasian region This comprehensive text places a significant emphasis on practical skills crucial for effective problem solving and design processes As the sole locally focused introductory text in the field it incorporates a multitude of topical examples drawn from various engineering domains vividly illustrating the roles and obligations inherent in professional engineering practice

Sustainability ethical considerations and proficient communication are recurring themes throughout the text underscoring their pivotal importance in the engineering profession Furthermore the book provides extensive coverage of soft skills alongside problem solving and design methodologies enhancing its utility as an indispensable guide for aspiring engineers
