**Design of New Materials** David L. Cocke, Abraham Clearfield, 2012-12-06 Dr George P Thomon Nobel Laureate in Physics said We have labelled civilizations by the main materials which they have used The Stone Age the Bronze Age and the Iron Age a civilization is both developed and limited by the materials at its disposal Today man lives on the

boundary between the Iron Age and a New Materials Age The ever more stringent requirements for materials to accomplish specific functions and withstand extreme conditions as dictated by the needs of industry and defense continue to spur ever more intensive research in Materials Science According to the recent report Trends and Opportunities in Materials Research a vital goal of materials research is to design synthesize and fabricate in high yield new materials with properties that can be predicted varied and controlled In the past this has been a fairly empirical process but as we gain more comprehensive understanding of the behavior of matter on an atomic and molecular scale this goal becomes ever more attainable An important recent trend is the increasing sophistication and power of theoretical approaches Aided by the development of computers and versatile numerical techniques as well as concepts from statistical mechanics theorists are beginning to confront the complexity of real materials Important advances are expected through a concentrated attack on model systems in which the theorist experimental scientist and engineer all work together towards designing new materials and controlling their properties
