and versatility of modern time series analysis as a tool for analyzing dependent data. A useful feature of
the presentation is the inclusion of nontrivial data sets illustrating the richness of potential applications to
problems in the biological, physical, and social sciences as well as medicine. The text presents a
balanced and comprehensive treatment of both time and frequency domain methods with an emphasis on
data analysis. Numerous examples using data illustrate solutions to problems such as discovering natural
and anthropogenic climate change, evaluating pain perception experiments using functional magnetic
resonance imaging, and the analysis of economic and financial problems. The text can be used for a one
semester/quarter introductory time series course where the prerequisites are an understanding of linear
regression, basic calculus-based probability skills, and math skills at the high school level. All of the
numerical examples use the R statistical package without assuming that the reader has previously used
the software. Robert H. Shumway is Professor Emeritus of Statistics, University of California, Davis. He is
