An Introduction to String Theory and D-brane Dynamics Richard J. Szabo, 2011 This invaluable book provides a quick introduction to the rudiments of perturbative string theory and a detailed introduction to the more current topic of D brane dynamics The presentation is very pedagogical with much of the technical detail streamlined The rapid but highly coherent introduction to the subject is perhaps what distinguishes this book from other string theory or D brane books This second edition includes an additional appendix with solutions to the exercises thus expanding on some of the technical material and making the book more appealing for use in lecture courses The material is based on mini courses in theoretical high energy physics delivered by the author at various summer schools so its actual level has been appropriately tested

Advances in String Theory Eric R. Sharpe, Arthur Greenspoon, 2008 Over the past decade string theory has had an

increasing impact on many areas of physics high energy and hadronic physics gravitation and cosmology mathematical physics and even condensed matter physics The impact has been through many major conceptual and methodological developments in quantum field theory in the past fifteen years In addition string theory has exerted a dramatic influence on developments in contemporary mathematics including Gromov Witten theory mirror symmetry in complex and symplectic geometry and important ramifications in enumerative geometry This volume is derived from a conference of younger leading practitioners around the common theme What is string theory The talks covered major current topics both mathematical and physical related to string theory Graduate students and research mathematicians interested in string theory in mathematics and physics will be interested in this workshop

Introduction to the Relativistic String Theory

Boris Mikha?lovich Barbashov,Vladimir Vital?evich Nesterenko,1990 This book presents a systematic and detailed account of the classical and quantum theory of the relativistic string and some of its modifications Main attention is paid to the first quantized string theory with possible applications to the string models of hadrons as well as to the superstring approach to unifications of all the fundamental interactions in the elementary particle physics and to the cosmic strings Some new aspects are provided such as the consideration of the string in an external electromagnetic field and in the space time of constant curvature the de Sitter universe the relativistic string loaded by point like masses and the Cartan method for describing the classical string dynamics The relativistic membranes and p branes are also considered briefly The book is sufficiently self contained and can be considered as an introduction to this new and fast developing branch of the elementary particle physics

String Theory In Curved Space Times, A Collaborative Research Report Normalized Sanchez,1998-05-30

The main goal and impact of modern string theory is to provide a consistent quantum theory of gravity This book provides an updated collection of original new developments and fundamental research in string theory in connection with gravity and physics at the Planck energy scale Topics treated in this volume by pioneering researchers in the field include classical and quantum string dynamics in strong gravitational fields space time singularities black holes and cosmological backgrounds particle and string scattering at the Planck energy scale string cosmology and its observational consequences the new features of multistrings and of quantum particle transmutation for strings in curved spacetimes The book deals with i the several new methods developed to solve the highly nonlinear string dynamics in curved spacetimes approximative perturbative methods asymptotic expansions exact local expansions and exact global over the whole world sheet string solitonic solutions ii the string energy momentum tensor and the equation of state for the string matter the stretching of the string size in spacetimes with event horizons and near spacetime singularities iii the canonical and semiclassical quantization of strings in curved spacetimes and the physical effects found for the mass spectrum structure of levels scattering amplitudes number operator and particle transmutation

Classical Gravity Solutions in String Theory

Candice Lee Kent,2000

Non-critical String Theory Stanislav Klimenko,Igor Nikitin,2007 The relativistic string theory was born in 1960s The

stimulus was an observation that the dual model of hadronic interactions proposed by Veneziano is adequate not to the quantum theory of usual null dimensional particles but to the theory of one dimensional relativistic objects the strings It has been immediately found that a self consistent quantum theory of bosonic relativistic strings can be constructed in frames of standard quantisation scheme only in a space time of dimension 26 Inclusion of fermions has decreased this critical dimension to 10 However it is evident from the experiment that elementary particles and their constituents live in the space time of dimension 4 The attempt to show that extra 6 dimensions are compactified on the scale of Planck s length in the spirit of old ideas by Kaluza Klein just created further complications This book differs from traditional presentations of the classical and quantum theory of relativistic strings by two aspects First it proposes and consistently implements an idea of mathematical modelling and computer visualisation of topologically non trivial solutions of the classical equations of motion of relativistic strings Second on this basis it successfully implements a quantisation scheme originating from the papers by G P Pron ko which uses a different set of dynamical variables canonically equivalent to the variables of standard scheme in frames of Hamiltonian formalism and Dirac s quantisation procedure
