Prentice Hall Biology Kenneth Raymond Miller, Joseph S. Levine, 2007      **The Living Environment: Prentice Hall Br**  
John Bartsch, 2009      Holism and Reductionism in Biology and Ecology Rick C. Looijen, 2012-12-06 Holism and reductionism are traditionally seen as incompatible views or approaches to nature Here Looijen argues that they should rather be seen as mutually dependent and hence co operating research programmes He sheds some interesting new light on the emergence thesis its relation to the reduction thesis and on the role and status of functional explanations in biology He discusses several examples of reduction in both biology and ecology showing the mutual dependence of holistic and reductionist research programmes Ecologists are offered separate chapters clarifying some major yet highly and controversial ecological concepts such as community habitat and niche The book is the first in depth study of the philosophy of ecology Readership Specialists in the philosophy of science especially the philosophy of biology biologists and ecologists interested in the philosophy of their discipline Also of interest to other scientists concerned with the holism reductionism issue      TIP 35: Enhancing Motivation for Change in Substance Use Disorder Treatment (Updated 2019) U.S. Department of Health and Human Services, 2019-11-19 Motivation is key to substance use behavior change Counselors can support clients movement toward positive changes in their substance use by identifying and enhancing motivation that already exists Motivational approaches are based on the principles of person centered counseling Counselors use of empathy not authority and power is key to enhancing clients motivation to change Clients are experts in their own recovery from SUDs Counselors should engage them in collaborative partnerships Ambivalence about change is normal Resistance to change is an expression of ambivalence about change not a client trait or characteristic Confrontational approaches increase client resistance and discord in the counseling relationship Motivational approaches explore ambivalence in a nonjudgmental and compassionate way

Ehrlich, 2010-01-08 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conservation and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources
