Fundamentals of Boundary-Layer Meteorology Xuhui Lee,2017-08-18 This textbook introduces a set of fundamental equations that govern the conservation of

mass dry air water vapor trace gas momentum and energy in the lower atmosphere Simplifications of each of these equations are made in the context of boundary layer processes Extended from these equations the author then discusses a key set of issues including 1 turbulence generation and destruction 2 force balances in various portions of the lower atmosphere 3 canopy flow 4 tracer diffusion and footprint theory 5 principles of flux measurement and interpretation 6 models for land evaporation 7 models for surface temperature response to land use change and 8 boundary layer budget calculations for heat water vapor and carbon dioxide Problem sets are supplied at the end of each chapter to reinforce the concepts and theory presented in the main text This volume offers the accumulation of insights gained by the author during his academic career as a researcher and teacher in the field of boundary layer meteorology

Discrete Mathematical Structures for Computer Science Bernard Kolman, Robert C. Busby, 1987 This text has been designed as a complete introduction to discrete mathematics primarily for computer science majors in either a one or two semester course The topics addressed are of genuine use in computer science and are presented in a logically coherent fashion The material has been organized and interrelated to minimize the mass of definitions and the abstraction of some of the theory For example relations and directed graphs are treated as two aspects of the same mathematical idea Whenever possible each new idea uses previously encountered material and then developed in such a way that it simplifies the more complex ideas that follow
