

25. The advantages of welded construction when applied to pressure vessels are: construction and maintenance cost are reduced, less material is used in the construction of welded vessels, thick plated pressure vessels, 3 to 5 inches in thickness must be welded.
26. The advantages in the application of welding to buildings are: materials are standard, readily available and accurate; large parts can be fabricated in the shop under controlled conditions; site erection is fast resulting in lower cost; construction material weigh less and are stronger; prefabricated modules provide flexibility of design and floor plan arrangements.
27. Bridges can have all-welded construction.
28. Due to the welding process, a more rigid frame construction, which include piling sections and reinforcing steel make a structure more resistant to earthquakes, floods, and high winds.
29. No. Pressures of over 1,000 psi and temperatures ranging from -200 to +1,2000 degrees F. are not uncommon in high pressure welded pipelines.
30. Some of the watercraft fabricated by welding includes aircraft carriers, destroyers, cruisers, and atomic-powered submarines.
31. The welding process is now constructing bridges wholly or in part. Savings in typical steel bridges, resulting from welded construction, range up to 20 percent. A welded butt joint is the best type of joint, with greater strength and a more uniform stress distribution in comparison to riveting.
32. Ten of the products manufactured wholly or in part by welding by the military are: pulley brackets, structural fittings, axles, struts, brackets, armor plate assemblies, gun mounts, gas and liquid tanks, engine cowling and wheel boots.
33. Welding is the principal method of joining materials used by the railroad industry. It is used as a maintenance tool, building streamlined diesel and electric locomotives, passenger cars, refrigerator cars, and new track which is continuously welded.
34. The three weaknesses are: service failure, a rivet joint develops a strength equal to only 80 percent of the plate and time consuming due to punching holes in the plate.
35. A tank which is over 3 inches can not be riveted, but can be welded.
