**Deep Space Telecommunications Systems Engineering** Joseph H. Yuen, 2013-04-17 The challenge of communication in planetary exploration has been unusual The guidance and control of spacecraft depend on reliable communication Scientific data returned to earth are irreplaceable or replaceable only at the cost of another mission In deep space communications propagation is good relative to terrestrial communications and there is an opportunity to press toward the mathematical limit of microwave communication Yet the limits must be approached warily with reliability as well as channel capacity in mind Further the effects of small changes in the earth s atmosphere and the interplanetary plasma have small but important effects on propagation time and hence on the measurement of distance Advances are almost incredible Communication capability measured in 18 bits per second at a given range rose by a factor of 10 in the 19 years from Explorer I of 1958 to Voyager of 1977 This improvement was attained through ingenious design based on the sort of penetrating analysis set forth in this book by engineers who took part in a highly detailed and amazingly successful pro gram Careful observation and analysis have told us much about limitations on the accurate measurement of distance It is not easy to get busy people to tell others clearly and in detail how they have solved important problems Joseph H Yuen and the other contribu tors to this book are to be commended for the time and care they have devoted to explicating one vital aspect of a great adventure of mankind

**Handbook of Modern Sensors** Jacob Fraden, 2006-04-29 Seven years have passed since the publication of the previous edition of this book During that time sensor technologies have made a remarkable leap forward The sensitivity of the sensors became higher the dimensions became smaller the sensitivity became better and the prices became lower What have not changed are the fundamental principles of the sensor design They are still governed by the laws of Nature Arguably one of the greatest geniuses who ever lived Leonardo Da Vinci had his own peculiar way of praying He was saying Oh Lord thanks for Thou do not violate your own laws It is comforting indeed that the laws of Nature do not change as time goes by it is just our appreciation of them that is being renewed Thus this new edition examines the same good old laws of Nature that are employed in the designs of various sensors This has not changed much since the previous edition Yet the sections that describe the practical designs are revised substantially Recent ideas and developments have been added and less important and nonessential designs were dropped Probably the most dramatic recent progress in the sensor technologies relates to wide use of MEMS and MEOMS micro electro mechanical systems and micro electro opto mechanical systems These are examined in this new edition with greater detail This book is about devices commonly called sensors The invention of a coprocessor has brought highly sophisticated instruments into our everyday lives
