we aim higher Each language in Seven More Languages in Seven Weeks will take you on a step by step journey through the most important paradigms of our time You ll learn seven exciting languages Lua Factor Elixir Elm Julia MiniKanren and Idris Learn from the award winning programming series that inspired the Elixir language Hear how other programmers across broadly different communities solve problems important enough to compel language development Expand your perspective and learn to solve multicore and distribution problems In each language you ll solve a non trivial problem using the techniques that make that language special Write a fully functional game in Elm without a single callback that compiles to JavaScript so you can deploy it in any browser Write a logic program in Clojure using a programming model MiniKanren that is as powerful as Prolog but much better at interacting with the outside world Build a distributed program in Elixir with Lisp style macros rich Ruby like syntax and the richness of the Erlang virtual machine Build your own object layer in Lua a statistical program in Julia a proof in code with Idris and a quiz game in Factor When you re done you ll have written programs in five different programming paradigms that were written on three different continents You ll have explored four languages on the leading edge invented in the past five years and three more radically different languages each with something significant to teach you

The Fourth Industrial Revolution Klaus Schwab, 2017-01-03 World renowned economist Klaus Schwab Founder and Executive Chairman of the World Economic Forum explains that we have an opportunity to shape the fourth industrial revolution which will fundamentally alter how we live and work Schwab argues that this revolution is different in scale scope and complexity from any that have come before Characterized by a range of new technologies that are fusing the physical digital and biological worlds the developments are affecting all disciplines economies industries and governments and even challenging ideas about what it means to be human Artificial intelligence is already all around us from supercomputers drones and virtual assistants to 3D printing DNA sequencing smart thermostats wear able sensors and microchips smaller than a grain of sand But this is just the beginning nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development Imagine smart factories in which global systems of manufacturing are coordinated virtually or implantable mobile phones made of biosynthetic materials The fourth industrial revolution says Schwab is more significant and its ramifications more profound than in any prior period of human history He outlines the key technologies driving this revolution and discusses the major impacts expected on government business civil society and individuals Schwab also offers bold ideas on how to harness these changes and shape a better future one in which technology empowers people rather than replaces them progress serves society rather than disrupts it and in which innovators respect moral and ethical boundaries rather than cross them We all have the opportunity to contribute to developing new frameworks that advance progress
