**An Assessment of the Prospects for Inertial Fusion Energy** National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Board on Physics and Astronomy, Committee on the Prospects for Inertial Confinement Fusion Energy Systems, 2013-07-05 The potential for using fusion energy to produce commercial electric power was first explored in the 1950s Harnessing fusion energy offers the prospect of a nearly carbon free energy source with a virtually unlimited supply of fuel Unlike nuclear fission plants appropriately designed fusion power plants would not produce the large amounts of high

level nuclear waste that requires long term disposal Due to these prospects many nations have initiated research and development R compares the various technical approaches to IFE and identifies the scientific and engineering challenges associated with developing inertial confinement fusion ICF in particular as an energy source It also provides guidance on an R D roadmap at the conceptual level for a national program focusing on the design and construction of an inertial fusion energy demonstration plant
