THE EVOLUTIONARY STRATEGIES THAT SHAPE ECOSYSTEMS

In 1837 a young Charles Darwin took his notebook wrote I think and then sketched a rudimentary stick like tree Each branch of Darwin s tree of life told a story of survival and adaptation adaptation of animals and plants not just to the environment but also to life with other living things However more than 150 years since Darwin published his singular idea of natural selection the science of ecology has yet to account for how contrasting evolutionary outcomes affect the ability of organisms to coexist in communities and to regulate ecosystem functioning In this book Philip Grime and Simon Pierce explain how evidence from across the world is revealing that beneath the wealth of apparently limitless and bewildering variation in detailed structure and functioning the essential biology of all organisms is subject to the same set of basic interacting constraints on life history and physiology The inescapable resulting predicament during the evolution of every species is that according to habitat each must adopt a predictable compromise with regard to how they use the resources at their disposal in order to survive The compromise involves the investment of resources in either the effort to acquire more resources the tolerance of factors that reduce metabolic performance or reproduction This three way trade off is the irreducible core of the universal adaptive strategy theory which Grime and Pierce use to investigate how two environmental filters selecting respectively for convergence and divergence in organism function determine the identity of organisms in communities and ultimately how different evolutionary strategies affect the functioning of ecosystems This book refl ects an historic phase in which evolutionary processes are finally moving centre stage in the effort to unify ecological theory and animal plant and microbial ecology have begun to find a common theoretical framework Companion website This book has a companion website [www.wiley.com/go/grime/evolutionarystrategies](http://www.wiley.com/go/grime/evolutionarystrategies) with Figures and Tables from the book for downloading

artificial intelligence AI can be found in our smart phones and TVs personalized recommendations for products in online shops or other businesses use AI techniques natural language processing can be used for automatic translation voice recognition and generation and the intelligent assistants of Google Amazon Apple and Microsoft such as Alexa Siri and Cortana are all AI computer programs AI can be found in our smart phones and TVs personalized recommendations for products in online shops or other businesses use AI techniques These are only some of the most well known uses of artificial intelligence In addition to this the application of AI is presently expanding to far larger scales For instance it is being used to make decisions that have a direct influence on the lives of humans such as whether or not to offer a credit line from a bank or whether or not to grant conditional release from prison Additionally it is being used to determine whether or not to issue a credit line from a bank or whether or not to grant conditional release from prison In the not too distant future it is projected that self driving cars and domestically intelligent robots that are able to aid those who are aging or disabled would become commercially accessible In this view human computer interaction comprises not only human artificial intelligence contact but also human artificial intelligence interaction to a very considerable degree Internet has already developed into a commonplace tool serving as a platform for the exchange of information the facilitation of communication the provision of entertainment and the transaction of online business This is in addition to artificial intelligence which is rapidly becoming an ever present component of our life Changes in human routines habits and mentalities were all brought about during this same time period by the advent of the internet It is possible for face to face interaction to be replaced by online communication which can result in a number of advantageous outcomes Two examples of these outcomes are the elimination of the demand for physical mobility and the reduction of distances
