Dictyostelium discoideum Protocols Ludwig Eichinger,2008-02-02 Dictyostelium discoideum is a simple but fascinating eukaryotic microorganism whose natural habitat is deciduous forest soil and decaying leaves where the amoebae feed on bacteria and grow as independent single cells Exhaustion of the bacterial food source triggers a developmental program in which up to 100 000 cells aggregate by chemotaxis towards cAMP Morphogenesis and cell differentiation then culminate in the production of spores enabling the organism to survive unfavorable conditions Dictyostelium offers unique advantages for studying fundamental cellular processes with the aid of powerful molecular genetic biochemical and cell biological tools These processes include signal transduction chemotaxis cell motility cytokinesis phagocytosis and aspects of development such as cell sorting pattern formation and cell type differentiation Recently Dictyostelium was also described as a suitable host for pathogenic bacteria in which one can conveniently study the process of infection In addition Dictyostelium has many of the experimental conveniences of Saccharomyces cerevisiae and is probably the best experimentally manipulatable protozoan providing insight into this diverse group of organisms which includes some of the most dangerous human parasites The recent completion of the Dictyostelium genome sequencing project strengthens the position of Dictyostelium discoideum as a model organism The completed genome sequence and other valuable community resources constitute the source for basic biological and biomedical research and for genome wide analyses

Natural Killer Cells in Human Diseases: Friends or Foes? Vincent Vieillard,Bree Foley,Sandra Lopez-Verges,2018-02-23 NK cells are lymphocytes of the innate immune system that share some features with adaptive immune cells like T cells They are well known for their importance to control viral infections and tumor development but also intracellular bacterial and parasitic infections A balance between negative and positive signals transmitted via germ line encoded inhibitory and activating receptors controls the function of NK cells Activated NK cells respond by killing the infected or tumor cells without prior sensitization and by

producing cytokines and chemokines It has been shown that NK cells cross talk with other immune cells such as dendritic cells and macrophages can shape T cell and B cell immune responses through direct interactions as well as by virtue of their cytokine chemokine production NK cells can also regulate immune responses by killing other immune cells including activated T cells or by producing anti inflammatory cytokines upon excessive inflammation However NK cells are not friends in all situations Indeed it has been shown in LCMV infected murine models that depending on the viral inoculation load NK cells may either help fight infection or can promote chronic infection Moreover in cancer models it has been shown that NK cells can kill anti tumoral T cells Recent studies of NK cells in patients with cancer support the notion of detrimental roles of NK cells Furthermore studies implicate NK cells in contributing to both graft rejection and tolerance to an allograft In some autoimmune diseases like rheumatoid arthritis NK cells may promote disease pathogenesis The scope of this Research Topic is to present and discuss knowledge on the role of NK cells in various diseases settings viral infections as well as other infections cancer transplantation and autoimmunity The aim is to discuss how NK cells respond during disease and specifically when why and how NK cells can be harmful and if they exert different functions production of specific cytokines inhibition of other immune cells through other mechanisms beside cytotoxicity in these situations Which are the NK cell subsets that play beneficial or deleterious roles in these diseases Are there different phenotypes associated with protective NK cells e g antiviral antitumoral and NK cells involved in disease pathogenesis How are these diverse NK cells activated and do they function primarily through direct cytotoxicity ADCC or cytokine and chemokine production What are the signals or interactions that can change and shape the NK cell response shifting them from protective to harmful We thank the authors that submitted reviews and original research manuscripts that help to better understand these questions with the aim that this will help the scientific community to determine what could be the main future research directions to better understand the role of NK cells in disease protection or development

Science John Michels (Journalist),2007 *Journal of the National Cancer Institute* ,2012 *Lab on a Chip* ,2006 **Morphogens in the Wiring of the Nervous System** Juan Pablo Henríquez,Nelson Osses,2024-04-11 Neuronal function relies on the establishment of proper connections between neurons and their target cells during development This basic statement involves several cellular processes such as neuronal differentiation the polarized outgrowth of axons and dendrites from differentiated neurons and the pathfinding of axons towards target cells The subsequent recognition of complementary synaptic partners finally triggers the formation maturation and maintenance of functional synapses Morphogens are secreted signaling molecules that regulate tissue patterning and cell identity during early embryonic development Remarkably growing evidence over the last years arising from different invertebrate and vertebrate model organisms has shown that after cell fate has been established morphogens also control the precise wiring of the nervous system

Molecular Biology of the Cell ,2006 **International Journal of Manufacturing Technology and Management** ,2006 **Andrology** Eberhard Nieschlag,Hermann M. Behre,Susan

Nieschlag,2010-01-13 The decade that has passed since publication of the second edition of this textbook has not only witnessed a tremendous increase in knowledge within the field of andrology but also seen the field itself achieve a newfound status within the medical profession Knowledge and status have been of mutual benefit to the field and the growing critical mass of diagnostic and therapeutic possibilities have caused andrology to be recognized as a medical subspecialty in some countries such as Germany Poland and Estonia The European Academy of Andrology EAA served as a pacemaker for this development and continues to strive for establishment of andrology as a clinical field Well designed curricula and qualifying examinations have contributed to the official recognition of andrology as a speciality This recognition of the field helps patients with andrological problems to find the specialist they seek This textbook summarizes the current state of knowledge in the field of andrology It is a source of knowledge to all those who are or want to become andrologists In addition as andrology is clearly an interdisciplinary field this book may serve as a compendium and source of reference for all those physicians and biologists active in neighboring areas who want to obtain an overview of andrology and who require information on special problems The extensive references are timely and up to date

Multidimensional Microscopy P.-C. Cheng,T.H. Lin,W.L. Wu,J.L. Wu,2012-12-06 Modern cell biology is being revolutionized by the wedding of microscopy and computers This book describes the new instrumentation and methods which allow three dimensional reconstruction of specimens Multidimensional Microscopy will be of interest to cell biologists microscopists and basic biomedical researchers whose work involves microscopic techniques This book presents current results on a very active field in modern biology methods in light and electron microscopy that allow the reconstruction of three dimensional objects with the aid of computers The book emphasizes the methods that can be used and examples of biological systems to which they have been applied It includes extensive descriptions of confocal microscopy and its applications as well as chapters on X ray microscopy low voltage electron microscopy and image reconstruction This is an impressive summary of state of the art methods in microscopy in which microscopes and computers are being joined to permit specimens to be examined and reconstructed in three dimensions Will be of interest to cell biologists biomedical researchers and microscopists

Proceedings of the National Academy of Sciences of the United States of America National Academy of Sciences (U.S.),2007 **Live Cell Imaging**
