Disability is Natural Aug 13 2021 In this user-friendly book, parents learn revolutionary common sense techniques for raising successful children with disabilities. When we recognize that disability is a natural part of the human experience, new attitudes lead to new actions for successful lives at home, in school and in communities. When parents replace today's conventional wisdom with the common sense values and creative thinking detailed in this book, all children with disabilities (regardless of age or type of disability) can live the life of their dreams. Readers will learn how to define a child by his or her assets - instead of a disability-related "problem," and how to create new and improved partnerships with educators, health care professionals, family and friends

Community Capacity and Resilience in Latin America Apr 13 2024 Community Capacity and Resilience in Latin America addresses the role of communities in building their capacity to increase resiliency and carry out rural development strategies in Latin America. Resiliency in a community sense is associated with an ability to address stress and respond to shock while obtaining participatory engagement in community assessment, planning and outcome. Although the political contexts for community development have changed dramatically in a number of Latin American countries in recent years, there are growing

opportunities and examples of communities working together to address common problems and improve collective quality of life. This book links scholarship that highlights community development praxis using new frameworks to understand the potential for community capacity and resiliency. By rejecting old linear models of development, based on technology transfer and diffusion of technology, many communities in Latin America have built capacity of their capital assets to become more resilient and adapt positively to change. This book is an essential resource for academics and practitioners of rural development, demonstrating that there is much we can learn from the skills of self-diagnosis and building on existing assets to enhance community capitals. Chapter 3 of this book is freely available as a downloadable Open Access PDF at http://www.taylorfrancis.com under a Creative Commons Attribution (CC-BY) 4.0 license.

Building Community Capacity for Tourism Development Sep 06 2023 A lack of entrepreneurial capacity, limited understanding of tourism markets and a lack of community understanding of tourism and its impacts have been identified as barriers to effective tourism development in peripheral regions. This book provides an analysis of this issue within tourism development practice.

Building Community Capacity Jun 15 2024 This book focuses on a gap in current social work practice theory: community change. Much work in this area of macro practice, particularly around "grassroots" community organizing, has a somewhat dated feel to it, is highly ideological in orientation, or suffers from superficiality, particularly in the area of theory and practical application. Set against the context of an often narrowly constructed "clinical" emphasis on practice education, coupled with social work's own current rendering of "scientific management," community practice often takes second or third billing in many professional curricula despite its deep roots in the overall field of social welfare. Drawing on extensive case study data from three significant community-building initiatives, program data from numerous other community capacity-building efforts, key informant interviews, and an

excellent literature review, Chaskin and his colleagues draw implications for crafting community change strategies as well as for creating and sustaining the organizational infrastructure necessary to support them. The authors bring to bear the perspectives of a variety of professional disciplines including sociology, urban planning, psychology, and social work. Building Community Capacity takes a collaborative, interdisciplinary approach to a subject of wide and current concern: the role of neighborhood and community structures in the delivery of human services or, as the authors put it, "a place where programs and problems can be fitted together." Social work scholars and students of community practice seeking new conceptual frameworks and insights from research to inform novel community interventions will find much of value in Building Community Capacity.

Municipalities and Community Participation Oct 07 2023 'Among all the literature on participation, this is the first book I know that focuses on municipal authorities. It... also has particular importance both for higher levels of government (at national or provincial/state level) and for international agencies. Firstly, it is a reminder of the importance of well-functioning municipal governments for reducing poverty. Secondly, it is a rich source of case studies and analysis about how municipal authorities can incorporate one central component of 'good governance' - a permanent, participatory engagement with their citizens' From the Foreword by David Satterthwaite, Director, Human Settlements Programme, International Institute for Environment and Development Increasingly, governments and donors are advocating the participation of poor communities in the delivery of urban services and infrastructure. Yet local authorities responsible for implementing participatory policies often do not have the skills, organisations or resources needed, or an adequate idea of the capacity required. This sourcebook provides invaluable practical guidance for municipal officials, and others working in urban development and poverty reduction, on the range of issues to be addressed in planning and managing cities with community participation. It explains the key elements of participation, identifies common constraints and opportunities, describes the vehicles for moving

participation forward and outlines the capacity building needed for a municipality to achieve participatory goals.

Community Organizing and Community Building for Health May 02 2023 .

Community Collaboratives Dec 29 2022 The process of youth development, or an adolescent's pathway to young adulthood, spans multiple domains -- cognitive, physical, social, and emotional -- and calls for an equally comprehensive approach to framing and addressing youth issues. Community-level stakeholders and systems are ideally positioned to deliver the holistic, coordinated resources that positive youth development requires; it is here, in these local settings, that young people can access the kind of services, supports, and opportunities that promote long-term wellbeing. In the ideal, young people growing up in a community supportive of youth development would benefit from educational opportunities, health and human services, recreational activities, and other resources that were both comprehensive and integrated. However, the core concepts of positive youth development can be difficult to communicate in a clear and succinct manner. Also, the systems that serve young people tend to function independently of each other. And, in the policy arena, young people are disadvantaged by negative stereotypes and the fact that they wield no political power, especially if they are poor. As a result, most communities provide limited or unaligned resources for youth and focus instead on addressing specific youth problems or deficits. In this study, I focused on community collaboratives and their potential to reshape local attitudes and approaches to youth. A structured and intentional process of collaboration can build civic capacity to support a comprehensive array of resources for young people by introducing a shared vision that emphasizes youth development as a critical dimension of community well being, securing political will for communitywide reforms that enhance youth development, and reinforcing collective decision-making to coordinate the delivery of supportive services. I asked: How did aspects of community context facilitate the emergence of community collaboratives? To what extent and under what conditions did community collaboratives generate civic capacity to support youth development? Did community collaboratives mobilize community support in ways that contributed to their own sustainability? Interviews, observations, and record data from California collaboratives in Daly City, Redwood City, and the South Coast region informed my analysis and highlighted three critical inputs for collaborative work: structural support from a local institution, local stakeholders who are willing to lead collaborative work, and pre-existing interagency relationships. I also found that embedding the collaborative structure within public agencies, asking public leaders to own collaborative work, and facilitating multi-sector dialogue helped to build civic capacity for youth development. And I saw that civic capacity contributed to sustainability by establishing a broad leadership base, creating a clear succession plan, facilitating joint budgeting, and providing a way to engage key stakeholders in redefining collaborative priorities. These findings contribute to a deeper understanding of how collaboratives can change the way that communities frame and address youth issues, opportunities and resources. They also have practical implications for practitioners, policymakers, and funders who wish to support collaborative work. First, new or emerging collaboratives may benefit from organizational capacity-building, leadership development, and efforts to secure organizational-level commitments during the early stages of collaborative work. Also, this study underscores the need to maximize the particular contributions of different stakeholder groups: public stakeholders wield influence and resources while grassroots involvement confers legitimacy. And, the cases suggest that collaborative founders or funders should anticipate sustainability issues from the outset and use civic capacity to their advantage by structuring their work in a way that renews and reinforces the elements of civic capacity over time.

Nonpoint Source News-notes May 10 2021

Challenging Capacity Building Jan 30 2023 Interrogates the idea of capacity building theoretically and explores the variety of meanings, constructions and practices of capacity building. This book examines capacity building in both developing and developed countries and takes

the position that fragile communities are present in all societies.

Psychosocial Capacity Building in Response to Disasters Mar 20 2022 This book integrates Western mental health approaches and international models of psychosocial capacity building within a social ecology framework, providing practitioners and volunteers with a blueprint for individual, family, group, and community interventions. Joshua L. Miller focuses on a range of disasters at local, regional, national, and international levels. Global case studies explore the social, psychological, economic, political, and cultural issues affecting various reactions to disaster and illustrate the importance of drawing on local cultural practices to promote empowerment and resiliency. Miller encourages developing people's capacity to direct their own recovery, using a social ecology framework to conceptualize disasters and their consequences. He also considers sources of vulnerability and how to support individual, family, and community resiliency; adapt and implement traditional disaster mental health interventions in different contexts; use groups and activities to facilitate recovery as part of a larger strategy of psychosocial capacity building; and foster collective grieving and memorializing. Miller's text examines the unique dynamics of intergroup conflict and the relationship between psychosocial healing, social justice, and peace and reconciliation.

Measuring Capacity to Care Using Nursing Data Sep 13 2021 Measuring Capacity to Care Using Nursing Data presents evidence-based solutions regarding the adoption of safe staffing principles and the optimum use of operational data to enable health service delivery strategies that result in improved patient and organizational outcomes. Readers will learn how to make better use of informatics to collect, share, link and process data collected operationally for the purpose of providing real-time information to decision- makers. The book discusses topics such as dynamic health care environments, health care operational inefficiencies and costly events, how to measure nursing care demand, nursing models of care, data quality and governance, and big data. The content of the book is a valuable source for graduate students in informatics, nurses, nursing managers and several members involved in health care who are interested in learning more about the beneficial use of informatics for improving their services. Presents and discusses evidences from real-world case studies from multiple countries Provides detailed insights of health system complexity in order to improve decision- making Demonstrates the link between nursing data and its use for efficient and effective healthcare service management Discusses several limitations currently experienced and their impact on health service delivery

Communities in Action Jun 10 2021 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Caring Capacity Versus Carrying Capacity Jun 03 2023 "Focuses on the response of one particular area--San Diego's North County [a region comprising relatively wealthier communities like Cardiff-by-the Sea, Del Mar, Rancho Santa Fe]--to the presence of large numbers of Mexican immigrants. It explores the tensions generated and the innovative approaches adopted--what worked, and what did not"--Preface, p. [vii].

Good Practices and Pitfalls in Community-based Capacity Building and Early Intervention Projects May 14 2024

Increasing Capacity for Stewardship of Oceans and Coasts Jun 22 2022 Marine environments support the livelihoods, economies, and quality of life for communities around the world. But growth of coastal populations and increasing demands on marine resources are putting the future of ocean and coastal resources at risk through impacts such as overfishing, wetland drainage, climate change, and pollution of coastal waters. Given these demands, it is vital to build capacity-the people, the institutions, and technology and tools-needed to manage ocean resources. Unfortunately, many capacity building efforts focus on specific projects rather than on capacity building as goal unto itself, resulting in activities that are not funded or sustained past the typically short project lifetime. This book finds that the most successful capacity-building efforts meet the needs of a specific locale or region based on periodic assessments and include plans to maintain and expand capacity after the project ends. The report recommends ways that governments and organizations can help strengthen marine protection and management capacity, including conducting periodic program assessments, making plans to sustain funding, and developing leadership and political will. The book was produced at the request of Gordon and Betty Moore Foundation, the President's Circle of the National Academies, the David and Lucile Packard Foundation, the National Oceanic and Atmospheric Administration, the National Science Foundation, the Marisla Foundation, and the Curtis and Edith Munson Foundation.

Organisational Capacity Building in Health Systems May 22 2022 Capacity building - which focuses on understanding the obstacles that prevent organisations from realising their goals, while promoting those features that help them to achieve measurable and sustainable results - is vital to improve the delivery of health care in both developed and developing countries. Organisations are important structural building blocks of health systems because they provide platforms for delivery of curative and preventive health services, and facilitate health workforce financing and functions. Organisational capacity building involves more than training and equipment and this book discusses management capacity to restructure systems, structures and roles strategically to optimise organisational performance in healthcare. Examining the topic in a practical and comprehensive way, Organisational Capacity Building in Health Systems is divided into five parts, looking at: What health organisations are and do Management and leadership in health organisations How to build capacity in health systems Building capacity in a range of health system contexts Dealing with challenges in building capacity and evaluating work Looking at how to effectively design, implement and evaluate organisational capacity building initiatives, this book is ideal for public health, health promotion and health management researchers, students and practitioners.

Communities That Care Feb 11 2024 Scholars and policymakers increasingly call for evidence-based, prevention-oriented, and community-driven approaches to improve public health and reduce youth crime, substance use, and related problems. However, few functional models exist. In Communities that Care, four leading experts on prevention describe one such system to illustrate how communities effectively engage in prevention activities. Communities That Care (CTC) is a coalition-based prevention system implemented successfully in dozens of communities across the world that promotes healthy development and reduces crime rates for youth. Drawing on literature from criminology, community psychology, and prevention science this book describes the conditions and actions necessary for effective community-based prevention. The authors illustrate how effective community-based prevention can be undertaken by describing how the CTC prevention system has been developed, implemented, evaluated, and disseminated across the U.S. and internationally. Communities that Care shares invaluable lessons about the implementation and evaluation of community-level interventions and establishes a set of best practices for anyone seeking to engage in and/or evaluate effective prevention efforts.

Capacity-building for Knowledge Generation Jul 12 2021 "This book contains seven chapters, each of which presents one of more cases of action learning or capacity development. These cases have engaged the research and non-governmental communities in diverse settings in --

mostly -- Africa. All aimed to strengthen intellectual engagement and the culture of enquiry, as part of a knowledge translation process. This means that not only knowledge institutes and researchers participated but also problem owners, policymakers, practitioners, advocates and other end-users of research."--Publisher.

Promoting Health at the Community Level Jan 18 2022 Providing a systematic examination of community-based health promotion, this text offers nine case studies which illustrate what community-driven health promotion means in practice evaluates its potential for achieving improvements in the health of local populations & presents strategies for the future.

Capacity Development in Practice Oct 27 2022 First Published in 2010. Routledge is an imprint of Taylor & Francis, an informa company.

Crossing Borders - Sharing Journeys Apr 20 2022 A growing number of nonprofit organizations have been created by immigrants and refugees to serve their communities in North America. These immigrant- and refugee-led organizations (IRLOs) work to provide services and meet a variety of needs, while at the same time building the infrastructure of these communities. Through a grant from the W. K. Kellogg Foundation Innovation Fund, Fieldstone Alliance initiated the two-year project in January 2004. The goal of Nexus was to enhance the knowledge and skills of capacity builders across North America in working with immigrant- and refugee-led organizations. The Nexus Project had two main components: research on capacity building with IRLOs and formation of a peer learning community among those who build the capacity of these organizations. This report draws three broad lessons for the capacity building field, with implications for the funding community, IRLOs, and capacity builders: effective capacity building takes time, which requires resources; more immigrant and refugee capacity builders are needed; and capacity builders need continuous learning and development. The Introduction describes the formation of the Nexus Project, its goals, and its working definitions. Chapter 1

describes the factors that result in effective capacity building with immigrant- and refugee-led organizations. Chapter 2 presents case studies from each of the Nexus partners. Each case study illustrates a practice used by Nexus partners when working with IRLOs. Chapter 3 details lessons Nexus partners learned through the course of this project. It further states implications of these lessons for those who fund work with IRLOs, for IRLO leaders, and for capacity building providers. The Appendices include a summary of IRLO research conducted by Wilder Research Center specifically for Nexus; a bibliography; and descriptions of the organizations and individuals who contributed to this report. Collaborating with Community-based Organizations Through Consultation and Technical Assistance Nov 08 2023 Community groups and human service organizations are under a tremendous amount of pressure to strengthen their programs and measure the effectiveness of their work. These challenges have prompted many to seek consultation and technical assistance in order to better plan, develop, and evaluate their services and resources and be more responsive to the needs of funders and the community. In this volume, practitioners and researchers present methods and strategies for assisting and collaborating with groups and agencies serving families. Helping a community or organization involves many tasks (reaching out to the community, building leadership, developing and planning for action) and requires specialized knowledge and skills. Contributors combine a research-based, theoretical framework with practical guidance to explain this process and offer cross-cultural case studies in a wide range of settings. The book begins with a discussion of the role of the coach or capacity-building consultant and the related but distinct activities of consultation, technical assistance, and service. The value of empowerment theory, adult learning theory, and change theory, among other theories, are outlined. Special emphasis is placed on the importance of cultural competence-the need to balance diverse needs, ethical mandates, and dilemmas is crucial. The book concludes with a detailed, step-by-step guide for helping an agency or program perform a self-evaluation. Skilled consultation and assistance enable organizations

to better support and strengthen families. While this book is grounded in research, it also reflects the lived experiences of each contributor and illuminates the complex yet vital role of the consultant.

Local Economic and Employment Development (LEED) Community Capacity Building Creating a Better Future Together Jan 10 2024 This book presents and analyses interesting recent developments in the field of community capacity building, in a variety of OECD and non-OECD countries. The focus is on how CCB has effected change in three major areas: social policy, local economic policy and environmental policy.

First Report for the Range and Capacity Review Sep 25 2022

Building Capacity from the Bottom Up Oct 15 2021 Capacity Building is not just a solution; it's a permanent solution to permanent problems. If you need a proven, logical process to sustain your local service idea beyond implementation to permanence, this is it. Streamline your efforts to improve lives and enhance community well-being. Benefit from the clear and compelling insights of successful program practitioners that explain how to realize your idea: - Foster continuous growth with cyclical bottom-up/top-down 21st-centuryleadership. - Collaborate with a mission-focused matrix of service providers and partners. - Develop action-oriented staff and partners with a vision-driven approach. - Cultivate essential relationships to develop permanent resources and funding streams. - Ensure constant efficiency and effectiveness with simple process and impact analyses. - Evaluate and define project scope continuously with the mantra "less is more." - Instill Capacity Building from the project's inception to establish permanence. - Tame the chaos with an easy-to-implement checklist of Effective Practices that work. Discover how your program becomes greater than the sum of its parts. Once you succeed with Capacity Building, you have the experience you need to build your next great idea. Why start to fail when you can start to last?

National Conference on Nonmetropolitan Community Services Research Dec 17 2021

Promoting the Health of the Community Apr 08 2021 Community health workers (CHWs) are an increasingly important member of the healthcare and public health professions who help build primary care capacity. Yet, in spite of the exponential growth of CHW interventions, CHW training programs, and CHW certification and credentialing by state agencies, a gap persists in the literature regarding current CHW roles and skills, scope of practice, CHW job settings, and national standards. This collection of contributions addresses this gap by providing information, in a single volume, about CHWs, the roles CHWs play as change agents in their communities, integration of CHWs into healthcare teams, and support and recognition of the CHW profession. The book supports the CHW definition as defined by the American Public Health Association (APHA), Community Health Worker Section (2013), which states, "A community health worker is a frontline public health worker who is a trusted member of and/or has an unusually close understanding of the community served." The scope of the text follows the framework of the nationally recognized roles of CHWs that came out of a national consensus-building project called "The Community Health Worker (CHW) Core Consensus (C3) Project". Topics explored among the chapters include: Cultural Mediation Among Individuals, Communities, and Health and Social Service Systems Care Coordination, Case Management, and System Navigation Advocating for Individuals and Communities Building Individual and Community Capacity Implementing Individual and Community Assessments Participating in Evaluation and Research Uniting the Workforce: Building Capacity for a National Association of Community Health Workers Promoting the Health of the Community is a must-have resource for CHWs, those interested in CHW scope of practice and/or certification/credentialing, anyone interested in becoming a CHW, policy-makers, CHW payer systems, CHW supervisors, CHW employers, CHW instructors/trainers, CHW advocates/supporters, and communities served by CHWs.

HUD Demonstration Act of 1993 Feb 04 2021

Building Community Capacity Mar 12 2024 This book focuses on a gap in current social work practice theory: community change. Much work in this area of macro practice, particularly around ""grassroots""

community organizing, has a somewhat dated feel to it, is highly ideological in orientation, or suffers from superficiality, particularly in the area of theory and practical application. Set against the context of an often narrowly constructed ""clinical"" emphasis on practice education, coupled with social work's own current rendering of ""scientific management,"" community practice often takes second or third billing in many professional curricula despite its deep roots in the overall field of social welfare.Drawing on extensive case study data from three significant community-building initiatives, program data from numerous other community capacity-building efforts, key informant interviews, and an excellent literature review, Chaskin and his colleagues draw implications for crafting community change strategies as well as for creating and sustaining the organizational infrastructure necessary to support them. The authors bring to bear the perspectives of a variety of professional disciplines including sociology, urban planning, psychology, and social work.Building Community Capacity takes a collaborative, interdisciplinary approach to a subject of wide and current concern: the role of neighborhood and community structures in the delivery of human services or, as the authors put it, ""a place where programs and problems can be fitted together."" Social work scholars and students of community practice seeking new conceptual frameworks and insights from research to inform novel community interventions will find much of value in Building Community Capacity.

Building Health Workforce Capacity Through Community-Based Health Professional Education Nov 27 2022 There is growing evidence from developed and developing countries that community-based approaches are effective in improving the health of individuals and populations. This is especially true when the social determinants of health are considered in the design of the community-based approach. With an aging population and an emphasis on health promotion, the United States is increasingly focusing on community-based health and health care. Preventing disease and promoting health calls for a holistic approach to health interventions that rely more heavily upon interprofessional collaborations. However, the financial and structural design of health professional education remains siloed and largely focused on academic health centers for training. Despite these challenges, there are good examples of interprofessional, community-based programs and curricula for educating health professionals. In May 2014, members of the Institute of Medicine's Global Forum on Innovation in Health Professional Education came together to substantively delve into issues affecting the scale-up and spread of health professional education in communities. Participants heard a wide variety of individual accounts from innovators about work they are undertaking and opportunities for education with communities. In presenting a variety of examples that range from student community service to computer modeling, the workshop aimed to stimulate discussions about how educators might better integrate education with practice in communities. Building Health Workforce Capacity Through Community-Based Health Professional Education summarizes the presentations and discussion of this event.

Conversational Capacity: The Secret to Building Successful Teams That Perform When the Pressure Is On Mar 08 2021 What keeps a team performing at its peak even under the most difficult conditions? Conversational capacity: the ability to have open, balanced, nondefensive dialogue In a world of mounting complexity and rapid-fire change, it's more important than ever to build teams that work well when the pressure is on. Craig Weber provides managers and team leaders with the communication tools they need to ensure that the team remains on track even when dealing with its most troublesome issues, responds to tough challenges with greater agility and skill, and performs brilliantly in circumstances that incapacitate less disciplined teams. Craig Weber is an international consultant specializing in team and leadership development.

Technical Assistance and Capacity Building Programs to Promote Housing and Economic Development Dec 09 2023

Needs and Capacity Assessment Strategies for Health Education and Health Promotion - BOOK ALONE Feb 28 2023 Needs and Capacity Assessment Strategies for Health Education and Health Promotion,

Fourth Edition provides practitioners with a handbook that can be used in the classroom and in the field. It focuses on realistic needs and capacity assessment strategies with considerations for preparation, implementation, and incorporation of findings into the planning process. It also provides an overview of settings, specific target audiences, approaches to assessing needs, and recommendations for addressing problems encountered along the way. The Fourth Edition continues to be reader friendly and worthwhile in terms of practical recommendations. The twelve chapters are realistic process discussions with mini-examples at the end based on the authors' experiences and those of others in the field. Case studies provide insight into various combinations of strategies used in a variety of settings. Two special articles at the end of the book provide further insight regarding community risk estimation and the use of metaphors to gain a better understanding of the perceived needs and capacities that are assessed.

The Careless Society Jul 24 2022 McKnight shows how the experts' best efforts to rebuild and revitalize communities can actually destroy them and celebrates the ability of neighborhoods to heal from within.

Optimizing Your Capacity to Care Jul 04 2023 Our nation's capacity to care is becoming increasingly stressed as an aging and increasingly unhealthy population collides with a relative reduction in the numbers of clinicians and ever-tightening financial resources. If even the mildest of future-state predictions are to be believed, we need a significant restructuring of our entire healthcare system and its total Capacity to Care, such that we can simultaneously improve care capacity, cost, quality, accessibility, and resource gratification. Optimizing Your Capacity to Care: A Systems Approach to Hospital and Population Health Management provides comprehensive guidance to a new way to optimize and manage community-wide Care Capacity via a unique, holistic approach to healthcare operations. Through clear examples and actual project results, the book demonstrates the outcomes of a systems-level way of thinking about a community's Capacity to Care that incorporates and integrates the full spectrum of available clinical and communal resources into the care of patients, including hospitals, physicians,

emergency departments, surgical services, local churches, civic organizations, pharmacies, and volunteers. The book details operational models for each major department of the hospital and a fully integrated communal resource pool to demonstrate how the optimization of capacity, resource utilization, cost, and clinical outcomes can be attained. And by providing healthcare leaders with a deeper understanding of key elements missing from the most common process improvement methodologies and approaches, this book offers fresh perspectives and bold alternatives for hospitals, health systems, and entire communities.

Service-Learning to Advance Access & Success Nov 15 2021 Throughout the 90s and early 2000s, service-learning research was intensely focused on the student outcomes. That body of research has effectively brought service-learning from the fringes into the mainstream of institutionalized pedagogies. In the past decade service-learning research has experienced an infusion of exploration in three distinct ways: first, large-scale quantitative methodologies; second, a proliferation of research that has explored how different sub-groups of students experience the pedagogy differently, thusly resulting in variation among outcomes; and third, a focus on the experiences and outcomes associated for communities and community partners engaged in service-learning. In an effort to support these movements, this volume of the Advances in Service-Learning Research series, Service-Learning to Advance Access & Success: Bridging Institutional and Community Capacity, focuses on how service-learning can advance access and success. Not simply access and success of students, but the ways that service-learning can advance access and success for all through bridging institutional and community capacity building. The chapters in this volume serve as a testament to the ways in which service-learning research continue to be advanced by thoughtful scholar-practitioners. The 12 chapters included in this volume are organized into three sections. The first section focuses on how institutional and community partnerships can be leveraged to build community capacity. The second section focuses on how institutions might build their own capacity to effect change for the good of society.

The third and final section focuses on six studies exploring the relationship service-learning pedagogy has with access and success for students. Of the six studies, three are situated within the context of teacher-preparation programs.

Capacity-building Aug 05 2023 This book considers specific and practical ways in which NGO's can contribute to enabling people to build on the capacities they already possess. It reviews the types of social organisation with which NGO's might consider working and the provision of training in a variety of relevant skills and activities.
