Communities in Action National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States some populations suffer from far greater disparities in health than others Those disparities are caused not only by fundamental differences in health status across segments of the population but also because of inequities in factors that impact health status so called determinants of health Only part of an individual s health status depends on his or her behavior and choice community wide problems like poverty unemployment poor education inadequate housing poor public transportation interpersonal violence and decaying neighborhoods also contribute to health inequities as well as the historic and ongoing interplay of structures policies and norms that shape lives When these factors are not optimal in a community it does not mean they are intractable such inequities can be mitigated by social policies that can shape health in powerful ways *Communities in Action Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States This report focuses on what communities can do to promote health equity what actions are needed by the many and varied stakeholders that are part of communities or support them as well as the root causes and structural barriers that need to be overcome

Democracy and Education John Dewey, 1916 Renewal of

Life by Transmission The most notable distinction between living and inanimate things is that the former maintain themselves by renewal A stone when struck resists If its resistance is greater than the force of the blow struck it remains outwardly unchanged Otherwise it is shattered into smaller bits Never does the stone attempt to react in such a way that it may maintain itself against the blow much less so as to render the blow a contributing factor to its own continued action While the living thing may easily be crushed by superior force it none the less tries to turn the energies which act upon it into means of its own further existence If it cannot do so it does not just split into smaller pieces at least in the higher forms of life but loses its identity as a living thing As long as it endures it struggles to use surrounding energies in its own behalf It uses light air moisture and the material of soil To say that it uses them is to say that it turns them into means of its own conservation As long as it is growing the energy it expends in thus turning the environment to account is more than compensated for by the return it gets it grows Understanding the word control in this sense it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up Life is a self renewing process through action upon the environment

Bowling Alone: Revised and Updated Robert D. Putnam, 2020-10-13 Updated to include a new chapter about the influence of social media and the Internet the 20th anniversary edition of *Bowling Alone* remains a seminal work of social analysis and its examination of what happened to our sense of community remains more relevant than ever in today's fractured America Twenty years ago Robert D Putnam made a seemingly simple observation once we bowled in leagues usually after work but no longer This seemingly small phenomenon symbolized a significant social change that became the basis of the acclaimed bestseller *Bowling Alone* which The Washington Post called a very important book and Putnam the de Tocqueville of our generation *Bowling Alone* surveyed in detail Americans changing behavior over the decades showing how we had become increasingly disconnected from family friends neighbors and social structures whether it's with the PTA church clubs political parties or bowling leagues In the revised edition of his classic work Putnam shows how our shrinking access to the social capital that is the reward of communal activity and community sharing still poses a serious threat to our civic and personal health and how these consequences have a new resonance for our divided country today He includes critical new material on the pervasive influence of social media and the internet which has introduced previously unthinkable opportunities for social connection as well as unprecedented levels of alienation and isolation At the time of its publication Putnam's then groundbreaking work showed how social bonds are the most powerful predictor of life satisfaction and how the loss of social capital is felt in critical ways acting as a strong predictor of crime rates and other measures of neighborhood quality of life and affecting our health in other ways While the ways in which we connect or become disconnected have changed over the decades his central argument remains as powerful and urgent as ever mending our frayed social capital is key to preserving the very fabric of our society
