US National Intelligence Council is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented, and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: Demographics (by 2040, 1.4 billion people will be added, mostly in Africa and South Asia), Economics (increased government debt and concentrated economic power will escalate problems for the poor and middle class), Climate (a hotter world will increase water, food, and health insecurity), and Technology (the emergence of new technologies could both solve and cause problems for human life). Students, trendspotters, policymakers, entrepreneurs, academics, journalists, and anyone eager for a glimpse into the next decades will find this report with colored graphs essential reading.

ENGINEERING ECONOMICS R. PANNEERSELVAM, 2013-10-21. Designed as a textbook for undergraduate students in various engineering disciplines (Mechanical, Civil, Industrial Engineering, Electronics Engineering, and Computer Science) and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student-friendly.

What's New to This Edition: Discusses different types of costs such as average cost, recurring cost, and life cycle cost; Deals with different types of cost estimating models, index numbers, and capital allowance; Covers the basics of nondeterministic decision making; Describes the meaning of cash flows with probability distributions and decision making and selection of alternatives using simulation; Discusses the basic concepts of Accounting. This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful, not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

The Performance Economy W. Stahel, 2010-02-24. This updated and revised edition outlines strategies and models for how to use technology and knowledge to improve performance, create jobs, and increase income. It shows what skills will be required to produce, sell, and manage performance over time and how manual jobs can contribute to reduce the consumption of non-renewable resources.
