On Filtered Binary Processes R. F. Pawula, S. O. Rice, RANDOM APPLICATIONS INC MONTROSE CO., 1984 The problem of calculating the probability density function of the output of an RC filter driven by a binary random process with intervals generated by an equilibrium renewal process is studied. New integral equations closely related to McFadden's original integral equations are derived and solved by a matrix approximation method and by iteration. Transformations of the integral equations into differential equations are being investigated. Some numerical results which compare the matrix and iteration solutions with both exact solutions and approximate solutions based upon the Fokker-Planck equation are presented. Author

Physical Properties of Uranium Process Solutions Robert S. Ondrejcin, 1961 Integral diffusion coefficients, viscosities, densities, and surface tensions were measured for the aqueous uranyl nitrate-nitric acid-aluminum nitrate system. The variation of the uranium diffusion coefficient was determined as a function of uranium concentration, nitric acid concentration, and temperature.

Polymineral-Metasomatic Crystallogeneses Arkady Eduardovich Glikin, 2008-11-23 Polymineral Metasomatic Crystallogeneses is dedicated to the foundations of polymineral crystallogeneses in solutions typically occurring in nature. Effects, laws, and mechanisms of a metasomatic crystal replacement, joint crystal growth of different phases, mixed crystal formation and aggregate recrystallization, as well as oriented overgrowth, epitaxy, and quasi-epitaxy, and crystal habit origin are considered experimentally. The behaviour of these processes in nature are discussed in addition to pseudomorphs, poikilitic crystals, and other replacement forms. Features of rapakivi structure, fluorite morphology, and many more. The concept is a generalization of the classic theory on crystallogeneses which is complicated by phase interaction in polymineral systems. Polymineral Metasomatic Crystallogeneses is designed for chemists, geologists, physicists, and postgraduates and advanced undergraduate students of these fields.

Web Services Liang-Jie Zhang, 2004-09-23 Welcome to the proceedings of the 2004 European Conference on Web Services (ECOWS 2004). ECOWS is one of the leading international conferences focusing on Web services. ECOWS 2004 was a forum for researchers and practitioners from academia and industry to exchange information regarding advances in the state of the art and practice of Web services, identify emerging research topics, and define the future directions of Web services computing. ECOWS 2004 had a special interest in papers that contribute to the convergence of Web services, Grid computing, e-business, and autonomous computing, and papers that apply techniques from one area to another. This conference was called the International Conference on Web Services Europe in 2003. ECOWS 2004 was a sister event of the International Conference on Web Services 2004 (ICWS 2004) which attracted more than 250 registered participants in San Diego, USA. Web services are characterized by network-based application components and a service-oriented architecture using standard interface description languages and uniform communication protocols. Industrial application domains for Web services include business-to-business integration, business process integration and management, content management, e-sourcing, composite Web services, creation, design, collaboration for computer engineering, multimedia, communication, digital TV, and interactive Web solutions. Recently, Grid computing has also started to leverage Web services to define standard interfaces for business Grid services and generic reusable Grid resources. The program of ECOWS 2004 featured a variety of papers on topics ranging from Web services and dynamic business process composition to Web services and process management, Web services discovery, Web services security, Web services-based applications for e-commerce, Web services-based Grid computing, and Web services solutions.
