*Forest Monitoring* Oct 24 2022 Meteorological variables affect composition, structure, growth, health, and dynamics of forest ecosystems. The measurement of meteorological data at forest monitoring plots is essential for the interpretation of climate change effects. Within an ecological monitoring network, standard meteorological variables such as precipitation, air temperature, relative humidity, solar radiation, wind velocity, and direction should be measured. These variables are essential for the calculation of total deposition of air pollutants, for the interpretation of biological processes or for the derivation of water budgets and percolation from the rooting zone. Additional variables of interest are soil temperature, stand precipitation, and soil moisture. The magnitude and changes in time of the meteorological variables can be assessed as explanatory factors for other observations made in forest ecological monitoring. A detailed description of different methods is given. As an example for an integrated analysis, the application of meteorological data in water budget modeling is described and results of a pilot study are shown.

*Doing Cultural Geography* Dec 26 2022 Doing Cultural Geography is an introduction to cultural geography that integrates theoretical discussion with applied examples. The emphasis throughout is on doing. Recognising that many undergraduates have difficulty with both theory and methods courses, the text demystifies the 'theory' informing cultural geography and encourages students to engage directly with theory in practice. It emphasises what can be done with humanist, Marxist, post-structuralist, feminist, and post-colonial theory, demonstrating that this is the best way to prompt students to engage with the otherwise daunting theoretical literature. Twenty short chapters are grouped into five sections on Theory, Topic Selection, Methodology, Interpretation and Presentation. The main text is intercut with questions, suggestions for activities and short sample extracts from scholarly texts, chosen to exemplify the subject of the chapter and to stimulate further reading. Chapters conclude with glossaries and suggestions for further reading. Doing Cultural Geography will facilitate project work from small, classroom-based activities to the planning stages of undergraduate research projects. It will be essential reading for students in modules in cultural geography and foundation courses in human geography and theory and methods.
