Flying beyond the stall Douglas A. Joyce, 2014

The X 31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany the X 31 was the only X plane to be designed, manufactured and flight tested as an international collaboration. It was also the only X plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U S Navy, as well as the first X plane ever to perform at the Paris Air Show. Flying Beyond the Stall begins by describing the government agencies and private sector industries involved in the X 31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X 31's first flight and the first flights of Ship 1 and Ship 2. Subsequent chapters discuss envelope expansion, handling qualities especially at high angles of attack and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking such as helmet mounted display evaluations, handling quality studies, aerodynamic parameter estimation and a tailless study are also discussed. The book describes how in the aftermath of a disastrous accident with Ship 1 in 1995, Ship 2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s when it was refurbished for participation in the U S Navy's VECTOR program. The book ends with a
