Metric Pattern Cutting for Children's Wear and Babywear Winifred Aldrich,2009-07-07 This fourth edition of Metric Pattern Cutting for Children s Wear and Babywear remains the standard text book but has three major improvements First the sections have been re organised to

reflect changes in producing and marketing children's clothes. Today's popularity of easy fitting styles and knitted fabrics means that basic flat pattern cutting is used to construct the majority of children's wear and babywear and this type of cutting is therefore emphasised in this new edition. Shaped blocks and garments cut to fit the body form are still included and are placed in chapters covering some school uniform garments or more expensive fashion or formal clothes. The book now clearly separates the sections useful to student beginners (Parts One, Two and Three) and also offers more advanced or specialist sections for students who wish to pursue a career in children's wear or for designers working in the different manufacturing sectors of the trade. The second change in this fourth edition is the introduction of colour coding to the sections; this makes it easier to identify specific processes in the book and enhances the illustrations. Finally, the size charts have been revised to reflect the changes in body sizing. The clear division of the boys and girls measurements in the charts has been in response to the way clothes are marketed and to co-ordinate with European size charts. Plus charts for heavier children have also been added.

The Global Textile and Clothing Industry Roshan Shishoo, 2012-07-18. Advances in technology combined with the ever evolving needs of the global market are having a strong impact on the textile and clothing sector. The global textile and clothing industry: Technological advances and future challenges provides an essential review of these changes and considers their implications for future strategies concerning production and marketing of textile products. Beginning with a review of trends in the global textile industry, the book goes on to consider the impact of environmental regulation on future textile products and processes. Following this, the importance of innovation driven textile research and development and the role of strategic technology roadmapping are highlighted. Both the present structure and future adaptation of higher education courses in textile science are reviewed before recent advances in textile manufacturing technology including joining techniques, 3D body scanning and garment design are explored in depth. Finally, the global textile and clothing industry concludes by considering automating textile preforming technology for the mass production of fibre reinforced polymer (FRP) composites. With its distinguished editor and international team of expert contributors, *The global textile and clothing industry: Technological advances and future challenges* is an essential guide to key challenges and developments in this industrial sector. Comprehensively examines the implications of technological advancements and the evolving needs of the global market on the textile and clothing industry and considers their role on the future of textile manufacturing. The importance of innovation driven textile research and development and the role of strategic technology roadmapping are thoroughly investigated. Recent advances in textile manufacturing technology including joining techniques, 3D body scanning and garment design are explored in depth.
