Freshwater Prawn Farming Michael B. New,1982 This book has been prepared on the basis of Thai experience in the farming of the giant freshwater prawn Macrobrachium rosenbergii It has a practical orientation as it was written for extension and fishery officers as well as for practising aquaculturists willing to start freshwater prawn farming The farming of this prawn is of recent origin but is spreading very rapidly in several countries which followed the well divulgated example of Hawaiian prawn farmers At the time in which this manual was written Thailand had taken the world leadership in terms of production as the result of an active long term involvement of both the official and private sectors Since there is already a great deal of mainly scientific literature on this species this manual was conceived to fill a gap in the existing literature in order to provide information on how to go about M rosenbergii farming answering the numerous requests from member

Governments to FAO It contains some general information on the biology of the species and much more detailed information on larval rearing and pond culture The Thai practice forms the core of the manual but reference to other alternative techniques used elsewhere is given as well as additional literature reference relevant to each topic dealt with in the text for readers willing to enlarge their knowledge Annexes on water filtration nutrition of larvae description of the various larvel stages ponds feeds seine set design stock estimation and management strategy for Continuous culture technique are also provided as well as a glossary of scientific and technical terms used in the main text Contents Chpter 1 Introduction Chapter 2 Biology Distribution Life History Morphology Chapter 3 Hatchery Site Requirements Water Other Requirements Chapter 4 Hatchery Facilities The Larval Tank Holding and Mixing Tanks Air Water Pumps Monitoring Water Quality Miscellaneous Chapter 5 Hatchery Operations Egg Supply and Hatching Larval Environment Feeding Growth Rateand Metamorphosis Harvesting and Holding Post Larvae Transporting Post Larvae Problems Alternative Hatchery Techniques Chapter 6 Rearing Site Requirements Market Water Power Topography and Soil Access Sympathetic Authorities Labour Chapter 7 Farm Facilities The Pond Water Aeration Miscellaneous Chapter 8 Farm Operation Pond Management Stocking Feeding Monitoring Harvesting Post Harvest Problems Alternative Rearing Techniques Appendix 1 Water Filtration Appendix 2 Upward Flow Filtration Appendix 3 Production of Brine Shrimp Nauplii BSN Feed for Larvae Appendix 4 Production of Prepared Feed PF for Larvae Appendix 5 Key to Larval Stages of Freshwater Prawns Macrobrachium rosenbergii Appendix 6 Stock Estimation Appendix 7 Pond Feeds Appendix 8 Seine Net Design for Continuous Culture System Appendix 9 Example of Management Strategy for Continuous culture Technique Appendix 10 Glossary of Terms and Conversions Freshwater Prawn Farming Michael B. Shrimp Seed Production And Farming P.C. Thomas, *Crustacean Farming* John F. Wickins, Daniel O'C. Lee, 2008-04-15 Crustacean Farming Ranching and Culture Second edition John F Wickins and Daniel O C Lee The second edition of an extremely well received book Crustacean Farming deals with all cultivated crustaceans of commercial significance shrimp prawns crayfish lobsters crabs and spiny lobsters and examines the criteria by which both the feasibility and desirability of farming proposals are assessed The characteristics and production methods of farmed and candidate crustacean species are described in sufficient detail to enable areas of profitable involvement to be distinguished form other opportunities presenting only very high risks and possibilities for serious loss Coverage extends right from broodstock acquisition and management through to the operation of hatcheries nurseries and on growing units to key aspects of processing and marketing New to this second edition are ranching and re stocking operations together with the culture of ornamental shrimp and small crustaceans used as live food in fish and shellfish hatcheries The sections on crustacean diseases genetics and nutrition have been extended in the light of recent research advances Examples of investment and operating costs of the different culture options are compared and an analysis of current trends in world crustacean markets is presented to assist in economic and financial appraisal Special consideration is given to the place of crustacean farming within the economics of developing nations in relation to social and environmental impact in order to promote awareness of the wider implications of global developments The consequences of recent research and technical developments are considered together with concerns over genetic and animal welfare issues Specific areas where further advances in technology are needed to improve the reliability or productivity of farming systems are highlighted. This important book is a vital tool and reference work for all those involved with crustacean farming worldwide Giant Prawn Farming Michael B. New, 2002 With coastal fisheries in decline around the world there is mounting concern about how long current sources of seafood can supply world needs Governments resource managers and those who make their livelihood on fishing are seeking better ways to improve fishing yields Many seek greater emphasis on restocking and aquaculture based stock enhancement as a way rapidly to replenish depleted fish stocks and increase fishery landings This volume presents case studies that represent various scenarios and situations in using sea ranching and marine hatchery enhancement to generate income re establish fisheries and conserve aquatic biodiversity The studies demonstrate that stocking can clearly work in some cases to increase fishery landings but that economic success will depend on many factors **Sustainable Farming of Giant Freshwater Prawn** (Macrobrachium Rosenbergii) in India Anonymous, 2024-01-03 *Recent Developments in the Genetic Improvement of* the Giant Freshwater Prawn (Macrobrachium Sp.) ,2007 Broodstock Management and Fish Seed Production K. D'Abramo, 2011 Nursing of Freshwater Prawn Abdullah-Al-Mamun, Arshad Hossain, 2012-08 There has been a very rapid global expansion of freshwater prawn farming since 1990 this is mainly

because of the huge production of China but also in the last few years because of a rapid take off of farming in India and Bangladesh Survival at the end of the nursery phase can vary substantially and may be related to the territorial and cannibalistic nature of prawn PLs when cultured at high densities Nursery production may be enhanced by the addition of artificial substrates Seed cost is a dominant variable cost in prawn production Thereby cost efficiency of nurseries significantly impacts the prices of stocker size juveniles which in turn has a dramatic influence on the profitability of prawn grow out Therefore investigation into potential benefits derived from using artificial substrates a study was conducted in recirculatory system to evaluate the effects of substrates on the growth and survival of Macrobrachium rosenbergii postlarvae PL Result of the present study indicated that growth of M rosenbergii PLs improved in presence of artificial substrates but the artificial substrates did not improved survival
