Life-Span Developmental Psychology: Personality and Socialization presents papers on personality and socialization. The book discusses the history, theory, and psychological approaches of developmental psychology, with focus on socialization and personality development through the life span; personality dimensions; and theories of socialization and sex-role development. The text also describes the life-span perspective of creativity and cognitive styles; continuities in childhood and adult moral development revisited; and issues of intergenerational relations as they affect both individual socialization and continuity of culture. The interactional analysis of family attachments; social-learning theory as a framework for the study of adult personality development; person-perception research; and the perception of life-span development are also considered. The book further tackles the potential usefulness of the life-span developmental perspective in education; the strategies for enhancing human development over the life span through educational intervention; and some ecological implications for the organization of human intervention throughout the life span. Developmental psychologists, sociologists, gerontologists, and people involved in the study of child development will find the book invaluable. The book also discusses an abstract model versus an actual individual experience in dealing with crises, as well as the meanings of adaptation and survival during old age. Part III presents the normative life crises in the family circle covering topics such as parenthood, sex roles, depression, widowhood, and an example of situational stress. Part IV deals with the normative life crises and the social system, including socialization, life course, changing work cycles, and public policy on death. This book will prove valuable for psychologists, psychiatrists, sociologists, social workers, and behavioral scientists. *Lifespan Development: Biopsychosocial Perspectives* provides students with complete explorations of each developmental stage of the lifespan, beginning with conception and concluding with an examination of successful aging. Designed to provide readers with a holistic understanding of the complex progression of human life and aging, *Lifespan Development* is an ideal text for courses in psychology and human development. Here's just what you need to effectively care for your patients at any stage of life in today's ever-changing world of health care. This book provides insight into how brain-behavior relationships change over time, how disorders differ in presentation across the lifespan, and what longer-term outcomes look like. Providing practical guidance in a succinct and accessible format, this book covers the most common neurodevelopmental, behavioral and cognitive disorders, including but not limited to ADHD, cerebral palsy, traumatic brain injury, and epilepsy. Key points concerning the practice of developmental neuropsychology are emphasized in order to aid understanding of neuropsychological development and its impact on behavior, emotion, cognition, and social integration. This will be essential reading for advanced graduate students and early career professionals in the fields of neuropsychology, pediatric psychology, clinical psychology, school psychology, and rehabilitation psychology, as well as practitioners in the allied fields that interact with neuropsychology. By combining the best of topical and chronological approaches, this text presents life-span development as a motion picture rather than as a series of individual snapshots. This thorough revision of the highly successful first edition of *Life-Span Development* offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful aging and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in

self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work. Life-Span Development Psychology: Research and Theory covers the issues and problems associated with a life-span conceptualization of developmental psychology. The book discusses the status, issues, and antecedents of life-span developmental psychology; an approach to theory construction in the psychology of development and aging; and models and theories of development. The text also describes the methodology and research strategy in the study of developmental change; the application of multivariate strategies to problems of measuring and structuring long-term change; and the mechanisms required for the operation of perception and recognition. Learning and retention; language; and intellectual abilities are also considered. Developmental psychologists will find the study invaluable. Life Span Human Development is about the development of human beings – from conception to death. It highlights similarities as well as differences in developmental stages, and it asks fundamental questions about why we humans develop as we do. By illustrating the connections and relationships among all stages, "Lifespan" allows students to discover that human development is a lifelong process. The Second Edition offers an even stronger emphasis on the lifespan approach to development, as exemplified by four themes: Lifelong Growth, Continuity and Change, Changing Meanings and Changing Vantage Points, and Developmental Diversity. Lifespan Development is designed to help your students understand human growth and development across the lifespan. The contents of this text show that even though not all people are alike, they do go through similar stages of development. Young children learn to walk, talk, spell, jump, and tell jokes. Teens learn to become more independent. Adults take on more responsibilities for themselves and others. Throughout the lifespan, people continue to develop and change physically, cognitively, socially, and emotionally. The developmental theories of Erikson, Piaget, Vygotsky, and Kohlberg are highlighted. The text also includes strategies that promote lifespan health and wellness. The book focuses on the developmental analysis of the brain-culture-environment dynamic and argues that this dynamic is interactive and reciprocal. Brain and culture co-determine each other. As a whole, this book refutes any unidirectional conception of the brain-culture dynamic. Each is influenced by and modifies the other. To capture the ubiquitous reach and significance of the mutually dependent brain-culture system, the metaphor of biocultural co-constructivism is invoked. Distinguished researchers from cognitive neuroscience, cognitive psychology and developmental psychology review the evidence in their respective fields. A special focus of the book is its coverage of the entire human lifespan from infancy to old age. This text is a comprehensive yet understandable introduction to the nature of human growth and development. Organised chronologically, the text offers balanced coverage of the entire life cycle, this integrated treatment of all stages of development demonstrates and aids understanding of how early growth stages influence later life. Features: * Seven lifespan themes are introduced in Chapter 1 and emphasized throughout the book: nature/nurture, continuity/discontinuity, epigenetic principle, active/reactive development, theoretical perspectives, gender and interrelated aging processes. * The development chapters are organized into units, which include unit reviews and chapter reviews to facilitate study and to offer the instructor the option of incorporating a topical approach. * Lifespan Development in Action boxes bridge the gap between academic concepts and the practical experiences of students. New to this edition: * Thinking Questions in margins help students think critically about the lifespan themes throughout the text. * End of chapter Thinking in Action exercises focus on application of material. * Focus on Diversity boxes, formerly International Lifespan Development, now Visit the Preview Website to see sample chapters, get information on the supplements (including sample videos and on-line simulations), and much more, click here . Feldman maintains the student friendliness that has been the hallmark of Feldman's other development textbooks. It is rich in examples and illustrates the applications that can be derived from the research and theory of lifespan developmentalists. It pays particular attention to the applications that can be drawn from theory and research in the field. To optimize student learning and to provide instructors with maximum flexibility, the book uses a modular approach. Consequently, rather than facing long, potentially daunting chapters, students encounter material that is divided into smaller, more manageable
