Provides a critical understanding and evaluation of police tactics and the use of force Police violence has historically played an important role in shaping public attitudes toward the government. Community trust and confidence in policing have been undermined by the perception that officers are using force unnecessarily, too frequently, or in problematic ways. The use of force, or harm suffered by a community as a result of such force, can also serve as a flashpoint, a spark that ignites long-simmering community hostility. In *Evaluating Police Uses of Force*, legal scholar Seth W. Stoughton, former deputy chief of police Jeffrey J. Noble, and distinguished criminologist Geoffrey P. Alpert explore a critical but largely overlooked facet of the difficult and controversial issues of police violence and accountability: how does society evaluate use-of-force incidents? By leading readers through answers to this question from four different perspectives—constitutional law, state law, administrative regulation, and community expectations—and by providing critical information about police tactics and force options that are implicated within those frameworks, *Evaluating Police Uses of Force* helps situate readers within broader conversations about governmental accountability, the role that police play in modern society, and how officers should go about fulfilling their duties.

Introduction to design and analysis for educational intervention -- The nuts and bolts of single-case design -- The classic A-B-A-B design -- Complex single-case designs -- Visual analysis and interpretation strategies for single-case design -- Advanced empirical analyses of single-case data in practice and research -- Brief experimental analysis -- Single-case design for research purposes -- A response-to-intervention model incorporating experimental design. Much applied research takes place as if complex social problems--and evaluations of interventions to address them--can be dealt with in a purely technical way. In contrast, this groundbreaking book offers an alternative approach that incorporates sustained, systematic reflection about researchers' values, what values research promotes, how decisions about what to value are made and by whom, and how judging the value of social interventions takes place. The authors offer practical and conceptual guidance to help researchers engage meaningfully with value conflicts and refine their capacity to engage in deliberative argumentation. Pedagogical features include a detailed evaluation case, "Bridge to Practice" exercises and annotated resources in most chapters, and an end-of-book glossary. Create a more effective system for evaluating online faculty Evaluating Online Teaching is the first comprehensive book to outline strategies for effectively measuring the quality of online teaching, providing the tools and guidance that faculty members and administrators need. The authors address challenges that colleges and universities face in creating effective online teacher evaluations, including organizational structure, institutional governance, faculty and administrator attitudes, and possible budget constraints. Through the integration of case studies and theory, the text provides practical solutions geared to address challenges and foster effective, efficient evaluations of online teaching. Readers gain access to rubrics, forms, and worksheets that they can customize to fit the needs of their unique institutions. Evaluation methods designed for face-to-face classrooms,

from student surveys to administrative observations, are often applied to the online teaching environment, leaving reviewers and instructors with an ill-fitted and incomplete analysis. Evaluating Online Teaching shows how strategies for evaluating online teaching differ from those used in traditional classrooms and vary as a function of the nature, purpose, and focus of the evaluation. This book guides faculty members and administrators in crafting an evaluation process specifically suited to online teaching and learning, for more accurate feedback and better results. Readers will:

- Learn how to evaluate online teaching performance
- Examine best practices for student ratings of online teaching
- Discover methods and tools for gathering informal feedback
- Understand the online teaching evaluation life cycle

The book concludes with an examination of strategies for fostering change across campus, as well as structures for creating a climate of assessment that includes online teaching as a component. Evaluating Online Teaching helps institutions rethink the evaluation process for online teaching, with the end goal of improving teaching and learning, student success, and institutional results.

A guide to promoting literacy in the digital age

With young children gaining access to a dizzying array of games, videos, and other digital media, will they ever learn to read? The answer is yes—if they are surrounded by adults who know how to help and if they are introduced to media designed to promote literacy, instead of undermining it. Tap, Click, Read gives educators and parents the tools and information they need to help children grow into strong, passionate readers who are skilled at using media and technology of all kinds—print, digital, and everything in between.

In Tap, Click, Read authors Lisa Guernsey and Michael H. Levine envision a future that is human-centered first and tech-assisted second. They document how educators and parents can lead a new path to a place they call 'Readialand'—a literacy-rich world that marries reading and digital media to bring knowledge, skills, and critical thinking to all of our children. This approach is driven by the

urgent need for low-income children and parents to have access to the same 21st-century literacy opportunities already at the fingertips of today's affluent families. With stories from homes, classrooms and cutting edge tech labs, plus accessible translation of new research and compelling videos, Guernsey and Levine help educators, parents, and America's leaders tackle the questions that arise as digital media plays a larger and larger role in children's lives, starting in their very first years of life. Tap, Click, Read includes an analysis of the exploding app marketplace and provides useful information on new review sites and valuable curation tools. It shows what to avoid and what to demand in today's apps and e-books—as well as what to seek in community preschools, elementary schools and libraries. Peppered with the latest research from fields as diverse as neuroscience and behavioral economics and richly documented examples of best practices from schools and early childhood programs around the country, Tap, Click, Read will show you how to:

- Promote the adult-child interactions that help kids grow into strong readers
- Learn how to use digital media to build a foundation for reading and success
- Discover new tools that open up avenues for creativity, critical thinking, and knowledge-building that today's children need

The book's accompanying website keeps you updated on new research and provides vital resources to help parents, schools and community organizations. Pursuing sustainable development requires a whole-of-society effort, where the public sector engages with citizens, the private sector and civil society organisations. With this goal in mind, in 2014, the Nuevo León (Mexico) government created the Nuevo León's Council for Strategic Planning to develop, inter alia, a 2015-2030 Strategic Plan. The book is intended to help students understand and interpret research articles and how to evaluate what was done in the research. It is not intended to show them how to do research but rather how to understand research articles and evaluate that research. Create a more effective system for

evaluating online faculty Evaluating Online Teaching is the first comprehensive book to outline strategies for effectively measuring the quality of online teaching, providing the tools and guidance that faculty members and administrators need. The authors address challenges that colleges and universities face in creating effective online teacher evaluations, including organizational structure, institutional governance, faculty and administrator attitudes, and possible budget constraints. Through the integration of case studies and theory, the text provides practical solutions geared to address challenges and foster effective, efficient evaluations of online teaching. Readers gain access to rubrics, forms, and worksheets that they can customize to fit the needs of their unique institutions. Evaluation methods designed for face-to-face classrooms, from student surveys to administrative observations, are often applied to the online teaching environment, leaving reviewers and instructors with an ill-fitted and incomplete analysis. Evaluating Online Teaching shows how strategies for evaluating online teaching differ from those used in traditional classrooms and vary as a function of the nature, purpose, and focus of the evaluation. This book guides faculty members and administrators in crafting an evaluation process specifically suited to online teaching and learning, for more accurate feedback and better results. Readers will:

- Learn how to evaluate online teaching performance
- Examine best practices for student ratings of online teaching
- Discover methods and tools for gathering informal feedback
- Understand the online teaching evaluation life cycle

The book concludes with an examination of strategies for fostering change across campus, as well as structures for creating a climate of assessment that includes online teaching as a component. Evaluating Online Teaching helps institutions rethink the evaluation process for online teaching, with the end goal of improving teaching and learning, student success, and institutional results. An invaluable resource for professionals who wish to write book evaluations—and for all serious fans of

children's literature! This revised edition of *From Cover to Cover* offers a fresh, up-to-date look at some of the best examples of children's literature and also includes practical advice on how to write clearly articulated, reasoned opinions so that others can learn about books they have not yet read. A brief, updated introduction clearly explains how children's books evolve from manuscripts into bound books and the importance of the many different parts of a book (jacket flaps, title page, copyright, etc.) and changes in the children's book industry, such as the creation of two new major genre awards. In addition, the author demonstrates how to think about and critically evaluate several different genres of children's books. Included are sections about books of information (and the author's responsibility to document sources); traditional literature (myths, legends, tall tales, folktales); poetry, verse, rhymes, and songs; picture books; easy readers and traditional books; and fiction and graphic novels. There is also a concluding chapter on how to write reviews that are both descriptive and analytical, including a segment on children's literature blogs. Updated material includes:

- An introduction that reflects the many changes in the children's book industry
- A section on genres, including a discussion of graphic novels
- A section on children's literature blogs
- An introduction of two new major genre awards: the Robert F. Sibert Informational Book Award and the Theodor Seuss Geisel Award
- And more than 90% of the books cited have been updated from the first edition to more recent publications!

Complete revision of the author's "Book reviewing", originally published in 1945. This book provides, for Sweden an independent analysis from an international perspective of major issues facing the evaluation and assessment framework in education, along with current policy initiatives and possible future approaches. A librarian and authoritative reviewer provides practical guidelines to help other librarians, parents, teachers, children's literature students and general readers evaluate the strengths and weaknesses of a

children's book and write reviews for a particular audience. The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development. • A supplementary guide for students who are learning how to evaluate reports of empirical research published in academic journals. • Your students will learn the practical aspects of evaluating research, not just how to apply a laundry list of technical terms from their textbooks. • Each chapter is organized around evaluation questions. For each question, there is a concise explanation of how to apply it in the evaluation of research reports. • Numerous examples from journals in the social and behavioral

sciences illustrate the application of the evaluation questions. Students see actual examples of strong and weak features of published reports. • Commonsense models for evaluation combined with a lack of jargon make it possible for students to start evaluating research articles the first week of class. • The structure of this book enables students to work with confidence while evaluating articles for homework. • Avoids oversimplification in the evaluation process by describing the nuances that may make an article publishable even though it has serious methodological flaws. Students learn when and why certain types of flaws may be tolerated. They learn why evaluation should not be performed mechanically. • This book received very high student evaluations when field-tested with students just beginning their study of research methods. • Contains more than 60 new examples from recently published research. In addition, minor changes have been made throughout for consistency with the latest edition of the Publication Manual of the American Psychological Association. This book is about the patterns of connections between brain structures. It reviews progress on the analysis of neuroanatomical connection data and presents six different approaches to data analysis. The results of their application to data from cat and monkey cortex are explored. This volume sheds light on the organization of the brain that is specified by its wiring. "The motivation for this book was the realization that although many academics and others are called on to do reviewing, very few of them have any formal training, or sometimes, informal training, in how to referee. We who write all know how disconcerting it is to get a review that is either mindless or worse, savage. The goal of this book is to teach anyone who does reviewing the basic skills needed to be a competent reviewer. These skills include competence in evaluating psychological work and competence in communicating that evaluation. The chapters cover a wide variety of review types, ranging from reviewing articles to reviewing grant proposals to reviewing book proposals. This book

is for anyone who needs to review and who wants to ensure that he or she writes the same kind of review he or she would hope to receive"--Preface. (PsycINFO Database Record (c) 2006 APA, all rights reserved) Summary from OCLC: Academic criticism can be highly fraught and threatening, potentially wounding to the reviewed author and disruptive to the discipline, but it occurs routinely in review genres. This book explores how academics publically evaluate each others' work. Focusing on blurbs, book reviews, review articles, and literature reviews, the international contributors to the volume show how writers manage to critically engage with others' ideas, argue their own viewpoints, and establish academic credibility while simultaneously navigating these risky interactions. *Evaluating Research in Academic Journals* is a guide for students who are learning how to evaluate reports of empirical research published in academic journals. It breaks down the process of evaluating a journal article into easy-to-understand steps, and emphasizes the practical aspects of evaluating research - not just how to apply a list of technical terms from textbooks. The book avoids oversimplification in the evaluation process by describing the nuances that may make an article publishable even when it has serious methodological flaws. Students learn when and why certain types of flaws may be tolerated, and why evaluation should not be performed mechanically. Each chapter is organized around evaluation questions. For each question, there is a concise explanation of how to apply it in the evaluation of research reports. Numerous examples from journals in the social and behavioral sciences illustrate the application of the evaluation questions, and demonstrate actual examples of strong and weak features of published reports. Common-sense models for evaluation combined with a lack of jargon make it possible for students to start evaluating research articles the first week of class. New to this edition New chapters on: evaluating mixed methods research evaluating systematic reviews and meta-analyses program evaluation research Updated

chapters and appendices that provide more comprehensive information and recent examples Full new online resources: test bank questions and PowerPoint slides for instructors, and self-test chapter quizzes, further readings and additional journal examples for students. Discusses planning and performing staff evaluations and evaluating staff development programs in order to improve staff training and overall student achievement. *Understanding and Evaluating Research: A Critical Guide* shows students how to be critical consumers of research and to appreciate the power of methodology as it shapes the research question, the use of theory in the study, the methods used, and how the outcomes are reported. The book starts with what it means to be a critical and uncritical reader of research, followed by a detailed chapter on methodology, and then proceeds to a discussion of each component of a research article as it is informed by the methodology. The book encourages readers to select an article from their discipline, learning along the way how to assess each component of the article and come to a judgment of its rigor or quality as a scholarly report. This report on New Zealand provides, from an international perspective, an independent analysis of major issues facing the educational evaluation and assessment framework, current policy initiatives, and possible future approaches. *Program Evaluation* uses a practical, reader-friendly approach to de-mystify evaluation research, clarifying evaluation's relationship to social work practice and providing the knowledge necessary to conduct it. This book assumes some familiarity with traditional research methods and basic statistics or are currently studying them. It contains all necessary definitions and brief explanations of essential research terminology and concepts. However, it relates them directly to their usage in evaluation research, which is often quite different from the way they are used in traditional research. Well organized with excellent flow from chapter to chapter, *Program Evaluation* does not read like a research methods book, making it the most

accessible book on evaluation research available. Describes how to critique various types of study including: case studies, surveys, correlation studies, regression analysis studies, factor-analytic studies, discriminant analysis studies, factorial studies, and quasi-experimental studies. This book offers an inside look at how to publish scholarly articles, book reviews, grants, magazine articles, and commercial and scholarly books. This reissued book is one of the key works that influenced and shaped the contemporary evaluation field. The book developed a new, expanded conception of the validity of evaluation studies, based on broad criteria of truth, beauty, and justice. It also presented a widely-used typology of evaluation approaches and critiqued these approaches with the validity criteria. Its long term influence is demonstrated by the book, (published in 1980) and criteria being prominently featured in the overall theme for the forthcoming American Evaluation Association's annual conference in November, 2010. This book provides, for Sweden an independent analysis from an international perspective of major issues facing the evaluation and assessment framework in education, along with current policy initiatives and possible future approaches. This report provides an international comparative analysis and policy advice to countries on how evaluation and assessment arrangements can be embedded within a consistent framework to improve the quality, equity and efficiency of school education. An investigative account of the medical, sexual, and scientific questions surrounding the spread of AIDS across the country. This report on New Zealand provides, from an international perspective, an independent analysis of major issues facing the educational evaluation and assessment framework, current policy initiatives, and possible future approaches. What exactly is the Church Growth movement? This timely volume in the Counterpoints series addresses the history of the movement that has become such an enormous shaping force on the Western church today, and it explores--in a roundtable forum of leading voices--five main

perspectives on the classic Church Growth movement: Effective Evangelism View - presented by Elmer Towns Gospel in Our Culture View - presented by Craig Van Gelder Centrist View - presented by Charles Van Engen Reformist View - presented by Gailyn Van Rheen Renewal View - presented by Howard Snyder Each view is first presented by its proponent, then critiqued by the co-contributors. The interactive and fair-minded format allows the reader to consider the strengths and weaknesses of each view and draw informed, personal conclusions. Evaluating the Church Growth Movement concludes with reflections by three seasoned pastors who have grappled with the practical implications of Church Growth. The Counterpoints series presents a comparison and critique of scholarly views on topics important to Christians that are both fair-minded and respectful of the biblical text. Each volume is a one-stop reference that allows readers to evaluate the different positions on a specific issue and form their own, educated opinion. It's widely accepted that Transcendental Meditation (TM) can create peace for the individual, but can it create peace in society as a whole? And if it can, what could possibly be the mechanism? In An Antidote to Violence Barry Spivack and Patricia Saunders examine the peer-reviewed research and suggest that TM can influence the collective consciousness of a society which leads to a decrease in negative social trends, such as a decline in war fatalities, and to an increase in cooperation between nations. Weaving together psychology, sociology, philosophy, statistics, politics, physics and meditation, An Antidote to Violence provides evidence that we have the knowledge to reduce all kinds of violence in society. Evaluating Language Assessments offers a comprehensive overview of the theoretical bases and research methodologies for the evaluation of language assessments and demonstrates the importance of a fuller understanding of this widely used evaluative tool. The volume explores language assessment evaluation in its wider political, economic, social, legal, and ethical contexts

while also illustrating quantitative and qualitative methods through discussions of key research studies. Suitable for students in applied linguistics, second language acquisition and language assessment and education, this book makes the case for a clear and rigorous understanding of the theoretical and methodological underpinnings of language assessment evaluation in order to achieve fair assessments and just institutions. This book reviews the evaluation research literature that has accumulated around 19 K-12 mathematics curricula and breaks new ground in framing an ambitious and rigorous approach to curriculum evaluation that has relevance beyond mathematics. The committee that produced this book consisted of mathematicians, mathematics educators, and methodologists who began with the following charge: Evaluate the quality of the evaluations of the thirteen National Science Foundation (NSF)-supported and six commercially generated mathematics curriculum materials; Determine whether the available data are sufficient for evaluating the efficacy of these materials, and if not; Develop recommendations about the design of a project that could result in the generation of more reliable and valid data for evaluating such materials. The committee collected, reviewed, and classified almost 700 studies, solicited expert testimony during two workshops, developed an evaluation framework, established dimensions/criteria for three methodologies (content analyses, comparative studies, and case studies), drew conclusions on the corpus of studies, and made recommendations for future research. "This pocket guide provides a concise overview of how to complete a systematic review, and criteria that should be used for assessing the quality of existing reviews. It examines evidence-based practice, systematic reviews, and meta-analysis."--WorldCat. Successful Program Review outlines the key purposes and scope of program review, details the initial stages of developing a program review plan, and describes the nuts and bolts of conducting a review, the use of consultants, and a variety of methods for collecting

and analyzing data. This review, developed in partnership with UNICEF, provides Georgia with recommendations to strengthen its evaluation and assessment system to focus on helping students learn. It will be of interest to countries that wish to strengthen their own evaluation and assessment systems and, in turn, improve educational outcomes. During the past two decades, evaluation has come to play an increasingly important role in the operation of educational and social programs by national, state, and local agencies. Mandates by federal funding agencies that programs they sponsored be evaluated gave impetus to use of evaluation. Realization that evaluation plays a pivotal role in assuring program quality and effectiveness has maintained the use of evaluation even where mandates have been relaxed. With increased use --indeed institutionalization --of evaluation in many community, state, and national agencies, evaluation has matured as a profession, and new evaluation approaches have been developed to aid in program planning, implementation, monitoring, and improvement. Much has been written about various philosophical and theoretical orientations to evaluation, its relationship to program management, appropriate roles evaluation might play, new and sometimes esoteric evaluation methods, and particular evaluation techniques. Useful as these writings are, relatively little has been written about simple but enormously important activities which comprise much of the day-to-day work of the program evaluator. This book is focused on some of these more practical aspects that largely determine the extent to which evaluation will prove helpful. One of the major activities of academics is reviewing colleagues' manuscripts, yet no formal training on how to put together a meaningful review is usually provided by Ph.D. programs or professional associations. *Winning Reviews* brings together highly-respected scholars to discuss the fundamental nuts and bolts of writing a review. Insights are offered by leading journal editors and the vital role that reviews play in the knowledge creation process is

examined. The book provides a comprehensive and much-needed guide to evaluating and reviewing scholarly writing.
