Visual Thinking Strategies Sep 02 2021 "What's going on in this picture?" With this one question and a carefully chosen work of art, teachers can start their students down a path toward deeper learning and other skills now encouraged by the Common Core State Standards. The Visual Thinking Strategies (VTS) teaching method has been successfully implemented in schools, districts, and cultural institutions nationwide, including bilingual schools in California, West Orange Public Schools in New Jersey, and the San Francisco Museum of Modern Art. It provides for open-ended yet highly structured discussions of visual art, and significantly increases students' critical thinking, language, and literacy skills along the way. Philip Yenawine, former education director of New York's Museum of Modern Art and cocreator of the VTS curriculum, writes engagingly about his years of experience with elementary school students in the classroom. He reveals how VTS was developed and demonstrates how teachers are using art—as well as poems, primary documents, and other visual artifacts—to increase a variety of skills, including writing, listening, and speaking, across a range of subjects. The book shows how VTS can be easily and effectively integrated into elementary classroom lessons in just ten hours of a school year to create learner-centered environments where students at all levels are involved in rich, absorbing discussions.

Small Teaching Nov 04 2021 Employ cognitive theory in the classroom every day Research into how we learn has opened the door for utilizing cognitive theory to facilitate better student learning. But that's easier said than done. Many books about cognitive theory introduce radical but impractical theories, failing to make the connection to the classroom. In *Small Teaching*, James Lang presents a strategy for improving student learning with a series of modest but powerful changes that make a big difference—many of which can be put into practice in a single class period. These strategies are designed to bridge the chasm between primary research and the classroom environment in a way that can be implemented by any faculty in any discipline, and even integrated into pre-existing teaching techniques. Learn, for example: How

does one become good at retrieving knowledge from memory? How does making predictions now help us learn in the future? How do instructors instill fixed or growth mindsets in their students? Each chapter introduces a basic concept in cognitive theory, explains when and how it should be employed, and provides firm examples of how the intervention has been or could be used in a variety of disciplines. Small teaching techniques include brief classroom or online learning activities, one-time interventions, and small modifications in course design or communication with students.

Learning Strategies Dec 18 2022 Learning Strategies describes a program of research in learning strategies initiated by the Defense Advanced Research Projects Agency (DARPA) in 1976. The goal of the program is to improve learning, decrease training time, and reduce training costs by developing and evaluating instructional materials designed to teach basic intellectual and affective skills. This book records the program's progress and suggests further avenues for research. Comprised of eight chapters, this book begins with an overview of the theoretical underpinnings of the teaching and learning approaches to the improvement of education, followed by a discussion on DARPA's preliminary work on an empirically based learning-strategy training program as well as its efforts to expand and modify the program. In order to provide an intellectual foundation for this program, several fields are surveyed for potential learning strategies, namely, cognitive psychology, artificial intelligence, behavioral modification, and motor learning. An instructional systems development approach for learning strategies is also proposed. The final chapter deals with models of evaluation extant in education and training and discusses the specific application of transactional evaluation to the DARPA Learning Strategies Research Program. This monograph should be of interest to students, teachers, and educational psychologists.

Leadership Strategy and Tactics Apr 09 2022 The instant #1 New York Times, #1 Wall Street Journal, #1 USA Today bestseller answers the world's most complex question: How do you lead? Leadership is the most challenging of human endeavors. It is often misunderstood. It can bewilder, mystify, and frustrate even the most dedicated practitioners. Leaders at all levels are often forced to use theoretical guesswork to make decisions and lead their troops. IT DOESN'T HAVE TO BE THAT WAY. There are principles that can be applied and tenets that can be followed. There are skills that can be learned and maneuvers that can be practiced and executed. There are leadership strategies and tactics that have been tested and proven on the battlefield, in business, and in life. Retired U.S. Navy SEAL officer Jocko Willink delivers his powerful and pragmatic leadership methodology, which teaches how to lead any team in any situation to victory. This new expanded edition contains a protocol to develop and hone critical decision-making instincts and make them habitual.

Spatial Learning Strategies Jul 13 2022 Spatial Learning Strategies: Techniques, Applications, and Related Issues reviews the state of the art in spatial learning strategies and suggests ways in which such strategies (for example, spatial and semantic-network representations) may be more powerfully instantiated in text design and technology applications. Some of the most promising work in the field of learning strategies is documented. Comprised of 15 chapters, this book begins with an introduction to some of the theoretical underpinnings of spatial learning strategies as well as selected theories of information processing. The next section contains reports on specific learner-oriented techniques that

have been developed to improve the performances of students with respect to text processing. The discussion then turns to reports on specific techniques that have been developed and applied to other types of processing tasks (for example, test taking, problem solving) or to teacher-author communication, including text analysis and instructional strategies. The application of networking as a learning strategy to hearing-impaired students is also considered, along with schematizing, mapping, and concept structuring. The book concludes by assessing the implications of spatial strategies for education and applied research. This monograph will be of interest to behaviorists, cognitive and educational psychologists, teachers, school administrators, and policymakers.

Teach Students How to Learn Feb 25 2021 Co-published with and Miriam, a freshman Calculus student at Louisiana State University, made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third—These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple, straightforward strategies to use, they can significantly increase their learning and performance. For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years, ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Sandra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.

The day-to-day teaching techniques in this primer for new (and not so new) professors will prepare you to successfully field students' questions, teach legal analysis to first-year students, and make the most of today's pedagogy and technology to support your teaching.

Make It Stick Mar 28 2021 To most of us, learning something "the hard way" implies wasted time and effort. Good teaching, we believe, should be creatively tailored to the different learning styles of students and should use strategies that make learning easier. Make It Stick turns fashionable ideas like these on their head. Drawing on recent discoveries in cognitive psychology and other disciplines, the authors offer concrete techniques for becoming more productive learners. Memory plays a central role in our ability to carry out complex cognitive tasks, such as applying knowledge to problems never before encountered and drawing inferences from facts already known. New insights into how memory is encoded, consolidated, and later retrieved have led to a better understanding of how we learn. Grappling with the impediments that make learning challenging leads both to more complex mastery and better retention of what was learned. Many common study habits and practice routines turn out to be counterproductive. Underlining and highlighting, rereading, cramming, and single-minded repetition of new skills create the illusion of mastery, but gains fade quickly. More complex and durable learning come from self-testing, introducing certain difficulties in practice, waiting to re-study new material until a little forgetting has set in, and interleaving the practice of one skill or topic with another. Speaking most urgently to students, teachers, trainers, and athletes, Make It Stick will appeal to all those interested in the challenge of lifelong learning and self-improvement.
