The essays in this secondary-source reader humanize American history by portraying it as a story of real people with whom students can easily identify. More than 25 percent of the essays in the Tenth Edition are new, many from books that have been nationally and internationally recognized for their insight, accuracy, and timeliness, ensuring that the readings continue to be provocative and trustworthy. Each selection is preceded by an introduction for context, and a helpful glossary identifies important individuals, events, and concepts. Study questions follow each selection, prompting students to make comparisons between the readings.

A secret that someone is willing to kill for -- and kill on a scale unfathomable to Jim and his crew. War is brewing in the system unless he can find out who left the ship and why. Detective Miller is looking for a girl. One girl in a system of billions, but her parents have money and money talks. When the trail leads him to the Scopuli and rebel sympathizer Holden, he realizes that this girl may be the key to

The Elements of Statistical Learning Nov 13 2022 During the past decade there has been an explosion in computation and information technology. With it have come vast amounts of data in a variety of fields such as medicine, biology, finance, and marketing. The challenge of understanding these data has led to the development of new tools in the field

of statistics, and spawned new areas such as data mining, machine learning, and bioinformatics. Many of these tools have common underpinnings but are often expressed with different terminology. This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given, with a liberal use of color graphics. It should be a valuable resource for statisticians and anyone interested in data mining in science or industry. The book's coverage is broad, from supervised learning (prediction) to unsupervised learning. The many topics include neural networks, support vector machines, classification trees and boosting---the first comprehensive treatment of this topic in any book. This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least angle regression & path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. There is also a chapter on methods for "wide" data (p bigger than n), including multiple testing and false discovery rates. Trevor Hastie, Robert Tibshirani, and Jerome Friedman are professors of statistics at Stanford University. They are prominent researchers in this area: Hastie and Tibshirani developed generalized additive models and wrote a popular book of that title. Hastie co-developed much of the statistical modeling software and environment in R/S-PLUS and invented principal curves and surfaces. Tibshirani proposed the lasso and is co-author of the very successful *An Introduction to the Bootstrap*. Friedman is the co-

inventor of many data-mining tools including CART, MARS, projection pursuit and gradient boosting.

A Dance of Swords (In the Service of Dragons Book 2, 10th Anniversary Edition) Apr 06 2022 "A breathtaking world and an excellent epic fantasy series! This wonderful adventure reminds me of a cross between J.R.R. Tolkien, J.K. Rowling, Tad Williams, and C. S. Lewis." "Clear and simple prose. Swift, action-oriented scenes. Solidly built." --Foreword Magazine "This guarantees fans, and those fans will be ready to wield their swords against the Dark Lord in Stanek's next installment." -- VOYA, the leading magazine for YA librarians "Word of mouth turned it into a bestseller. Very satisfying." -- The Fantasy Guide In the Service of Dragons is the continuation of Robert Stanek's multilayered epic fantasy adventure for young adults that began with Kingdoms and the Elves of the Reaches. In the Kingdoms and the Elves of the Reaches books, Robert

Stanek introduced readers to the story of *Ruin Mist*, an extraordinary world of magic, adventure, and intrigue. Now in the eagerly awaited follow-up, he once again proves himself a wonderful storyteller with a gift for fast pacing and believable storylines. Already hailed as a classic, Robert Stanek's powerful series has been enjoyed by readers all over the world. *The Elves of the Reaches* returned from exile, bringing grave news. War came to the Kingdoms, and many perished in the turmoil and unrest. An attempt was made to kidnap a princess and assassinate a king. Now, from the ancient past a dark power returns. "The Fourth Wind blows across the mountain tops," they say. And the Twelve Clans emerge from myth and memory. As prophecy becomes reality, the factions struggle for control only to further divide the lands. Some would say that it was foolish for King Andrew Alder to support the Elves of the Reaches and send men to aid their cause when Men in all lands were being put to the test of steel. And in the North, men back their words with action. Against a backdrop of treachery and intrigue, murder and mayhem, the price of freedom is high. Many will pay with their lives. Many will succumb to imprisonment and enslavement; for when alliances shatter, old hatreds rise anew and the plotting and scheming begin. Bold, inventive, brilliantly imagined, *In the Service of Dragons* is a novel of magic and wonder—a tale of pure excitement you will not soon forget.
