Super-Resolution Imaging Subhasis Chaudhuri,2006-04-18 Super Resolution Imaging serves as an essential reference for both academicians and practicing engineers It can be used both as a text for advanced courses in imaging and as a desk reference for those working in multimedia electrical engineering computer science and mathematics The first book to cover the new research area of super resolution imaging this text includes work on the following groundbreaking topics Image zooming based on wavelets and generalized interpolation Super resolution from sub pixel shifts Use of blur as a cue Use of warping in super resolution Resolution enhancement using multiple apertures Super resolution from motion data Super resolution from compressed video Limits in super resolution imaging Written by the leading experts in the field Super Resolution Imaging presents a comprehensive analysis of current technology along with new research findings and directions for future work

Example-Based Super Resolution Jordi Salvador,2016-09-22 Example Based Super Resolution provides a thorough introduction and overview of example based super resolution covering the most successful algorithmic approaches and theories behind them with implementation insights It also describes current challenges and explores future trends Readers of this book will be able to understand the latest natural image patch statistical models and the performance limits of example based super resolution algorithms select the best state of the art algorithmic alternative and tune it for specific use cases and quickly put into practice implementations of the latest and most successful example based super resolution methods Provides detailed coverage of techniques and implementation details that have been successfully introduced in diverse and demanding real world applications Covers a wide variety of machine learning approaches ranging from cross scale self similarity concepts and sparse coding to the latest advances in deep learning Presents a statistical interpretation of the subspace of natural image patches that transcends super resolution and makes it a valuable source for any researcher on image processing or low level vision

**Motion-Free Super-Resolution** Subhasis Chaudhuri,Joshi Manjunath,2005-07-06 Motion Free Super Resolution is a compilation of very recent work on various methods of generating super resolution SR images from a set of low resolution images The current literature on this topic deals primarily with the use of motion cues for the purpose of generating SR images These cues have it is shown their advantages and disadvantages In contrast this book shows that cues other than motion can also be used for the same purpose and addresses both the merits and demerits of these new techniques Motion Free Super Resolution supersedes much of the lead author s previous edited volume Super Resolution Imaging and includes an up to date account of the latest research efforts in this fast moving field This sequel also features a style of presentation closer to that of a textbook with an emphasis on teaching and explanation rather than scholarly presentation

On Learning and Regularization in Super-Resolution Imaging Muhammad Ali Muhammad Rushdi,2013 Advances in super resolution imaging have been made by reconstruction interpolation and example based algorithmic techniques drawn from the fields of signal and image processing machine learning biologically inspired computer vision and psychology However the performance of super resolution algorithms has been limited by constraints of sampling frequency sensor dimensions sensor noise focus and motion blurring and alignment between low resolution input data samples In this dissertation we propose several techniques to improve the performance of state of the art super resolution techniques Firstly a concise introduction and literature survey of super resolution imaging research is given Secondly novel dictionary learning techniques for super resolution are presented Thirdly non uniform image super resolution over deformed image domains is approached using patch redundancy as well as resolution independence image models Experimental results are good in visual quality and compare well with other state of the art techniques Future work should explore the extension of the proposed methods to video and stereoscopic imaging

**Deep Learning Based Image Super Resolution** Xiang Wang,2021 Image super resolution is one of the most significant computer vision researches aiming to reconstruct high resolution images with realistic details from low resolution images In the past years a number of traditional methods intended to produce high resolution images Recently Deep Convolutional Neural Networks DCNNs have developed rapidly and achieved impressive progress in the computer vision area Benefiting from DCNNs the performance of image super resolution has improved compared with traditional methods However there still exists a large gap between the results of current methods and the real world high resolution quality In this thesis we leverage the techniques of DCNNs to develop image super resolution models for generating satisfactory high resolution images There are several proposed methods in this thesis to satisfy different super resolution scenarios Our proposed methods are based on Generative Adversarial Networks GANs leading to powerful generative ability and effective discriminative learning To breakthrough current bottlenecks we design novel architectures for generator and discriminator and involve new optimization strategies to improve the learning stability of the models In order to improve the generalization ability of proposed methods we conduct two mainstream super resolution tasks namely face image hallucination and natural image super resolution All the proposed components of our methods result in promising super resolution performance for these tasks Not only handling the supervised super resolution task we also investigate the more challenging problem namely the unsupervised image super resolution task where the paired high resolution image and low resolution image data are unavailable To evaluate the performance of our methods in different scenarios we conduct extensive experiments on several benchmark datasets to study each method separately Compared to state of the art methods our methods are able to achieve superior performance both quantitatively and qualitatively
