Brock Yates, one of the most respected writers in the auto world, was given unprecedented access to Chrysler - every planning session, presentation, budget review, test drive, assembly line start-up, and marketing launch. The result is a book that unveils the mysteries of modern car-making, revealing how cars are shaped through countless interlinked decisions ranging from size and power to door configurations, color selections, and innumerable other interconnected details. It also captures the complex process by which the thousands of separate pieces that make up a car are designed, tested, manufactured, and marshaled into place at the exact moment they are needed. For any reader who cares about cars, this is the most intriguing look inside the mysteries of their creation ever written. At the same time, The Critical Path recounts an extraordinary drama of all-too-human managers attempting to make something new, in a new way, inside a corporate culture that resists them at every turn. The story of how Chrysler's minivan platform team kept their commitment to quality, schedule, and budget - with a \$3 billion investment and the company's fate palpably in the balance - is as encouraging a tale as has emerged from American business in years. The unprecedented triumph and Chrysler's resultant comeback is a lesson in successful management that will be savored by any reader interested in how great companies make breakthrough products. Focussing on applications, this book covers a very broad range, including simple and complex univariate and multivariate density estimation, nonparametric regression estimation, categorical data smoothing, and applications of smoothing to other areas of statistics. It will thus be of particular interest to data analysts, as arguments generally proceed from actual data rather than statistical theory, while the "Background Material" sections will interest statisticians studying the field. Over 750 references allow researchers to find the original sources for more details, and the "Computational Issues" sections provide sources for

statistical software that use the methods discussed. Each chapter includes exercises with a heavily computational focus based upon the data sets used in the book, making it equally suitable as a textbook for a course in smoothing. The powerfully-built nightclub bouncer kidnapped and murdered 13 year old Milly Dowler as she walked home from school in broad daylight. She had stopped for a bag of chips with friends at a railway station cafe. The case horrified the nation when six months later her body was found 25 miles away by mushroom pickers in a quiet wood in the Hampshire countryside. Her abduction and death was described as 'every parent's nightmare'. He also murdered, in an equally horrendous manner, 19-year-old Marsha McDonnell and 22-year-old French student Amelie Delagrangue with blows to the head after they got off late-night buses in South London. He attempted to kill Kate Sheedy, an 18 year old he deliberately hit with his car as she walked home shortly after midnight, before reversing over her body. She survived only after major surgery in hospital.
