to mechanical efforts equally delightful It is only when presented to the child for the first time in the form of stale knowledge and foregone conclusions that the facts taught in these lessons appear dry and repulsive to him An effort is made in the following pages to treat the subject with the sort of sympathetic interest and freshness which attracts children to a new study A short summary of the chief points in each reading lesson is given in the form of questions and answers Easy verses illustrative of the various subjects are introduced in order that the children may connect pleasant poetic fancies with the phenomena upon which Geography so much depends It is hoped that these reading lessons may afford intelligent teaching even in the hands of a young teacher The first ideas of Geography the lessons on Place which should make the child observant of local geography of the features of his own neighbourhood its heights and hollows and level lands its streams and ponds should be conveyed viva voce At this stage a class book cannot take the place of an intelligent teacher Children should go through the book twice and should after the second reading be able to answer any of the questions from memory

Geography for the Fifth and Sixth Grades C. K. Studley, 2015-06-25 Excerpt from Geography for the Fifth and Sixth Grades A Course of Study and Teachers Manual In the fifth grade we are ready to take up in detail those things immediately around us and thus finish the foundation for future work no matter what the locality After the home region it is as easy to follow one sequence as another and many times easier to follow a text than to set up an arbitrary sequence and try to adapt the text to suit its needs Since following the text solves many difficulties and offers few obstacles the reasonable thing to do is to follow the book that has been prescribed and make the best of it by adding to or taking from it as the case demands The adding to it can best be done through many of the excellent supplementary readers As there are many things thrown into a description of any region for the sake of making it as complete as possible it becomes necessary for the teacher to select and evaluate the different topics Some are worth practically nothing while the others are of the utmost practical importance It is not an easy matter to say offhand just what is to be kept in and what is to be left out unless one takes a certain standard and judges all topics and details of content by that one standard If that is to be done the only legitimate standard will be the standard of use Of what use is it or of what use will it be This is the question that must be answered If the point will not defend itself when analyzed thus it must be rejected as a minor point Those things will be important that are of value in the everyday walks of life and not those that serve only a special purpose Since each teacher has several subjects to teach and consequently has a relatively small amount of time to be given to each subject she does not have the time to go through the entire course in geography to evaluate the various topics It is deemed advisable then to go through the course with her and suggest the value that each topic bears to the whole course so that she may at a glance see what may be a proper proportion of time to be given each topic It can hardly be hoped that the standards set up here are absolutely accurate in every case but they are at least approximately correct so that those who follow the course can easily make the necessary allowance one way or the other and soon have it adjusted to their ideas It is necessary to make such evaluation since most text book writers are more or less indiscriminate in treating the topics
