themselves and the system from within so that they can truly serve each of their students authentically and equitably Implementing the beliefs and actions in this book will position teachers to become more active partners in each other's professional growth so that they can navigate the obstacles in their professional landscape with renewed focus and a greater sense of individual and collective efficacy It equips teachers and by extension their students to chart their own course and author their own equitable and joyful mathematical and professional stories

Math Mammoth Grade 7-A Worktext Maria Miller, 2015-06-19 Math Mammoth Grade 7 A is the student worktext for the first half of grade 7 mathematics studies as part of Math Mammoth Grade 7 curriculum Please note that this particular book is the version with grayscale or black and white interior pages The curriculum meets and exceeds the Common Core Standards CCS for grade 7 It exceeds it because we study linear equations in more depth than required in grade 7 CCS We start out with an introduction to basic algebra which is in many ways a review of the same topics from 6th grade The first chapter reviews the order of operations the concepts of an expression and equation and the distributive property Students learn about the commutative and associative properties of addition and multiplication and they simplify expressions that don't involve negative numbers In chapter 2 we study integers and their operations in detail Again some of this is review from 6th grade and some of it is new The four operations of integers are explained with the help of two visual models the number line and counters hopefully providing an intuitive understanding of the processes Students need to be able to add subtract multiply and divide integers when they learn to solve equations in chapter 3 In the end of the chapter students also learn about negative fractions The lesson about distance contains a formula that may look unfamiliar to the teacher You can find the distance between two integers by taking the absolute value of their difference In symbols the distance between a and b is $|a - b|$ The idea behind the formula is simple though and most people use that idea instinctively without knowing about the formula For example how far apart from each other are 14 and 92 To solve that mentally we find their difference but we take that difference in a positive sense In other words we do not calculate $14 - 92 = -78$ and state that the distance is negative 78 units but instead we say the distance is 78 units because distance is always positive The absolute value takes care of that it turns any negative quantity into a positive one In the next chapter chapter 3 students study simple one step equations They already know the basics of how to solve this type of equations from 6th grade but this time we use negative numbers in them Chapter

4 is titled Rational Numbers which are simply fractions and certain decimals so the student is already very familiar with them The goal of the chapter is to be able to add subtract multiply and divide both positive and negative fractions and decimals We also solve simple equations involving fractions and decimals and learn about scientific notation and complex fractions The last chapter in part 7 A focuses on linear equations The student learns to solve various types of linear equations and practices using those in simple word problems We study linear inequalities but not to the same depth as linear equations Lastly the student graphs linear equations and is introduced to the concept of slope which is the steepness of a line The student will continue studying these topics with more details in an Algebra 1 Course
