Using these standard procedures and protocols as its template, this eBook presents step-by-step scripts that enable new practitioners and seasoned EMDR clinicians, trainers, and consultants alike to incorporate EMDR Therapy into their case conceptualizations and treatment plans when working with populations in the aftermath of such catastrophic events as earthquakes, mining accidents, tsunami, and ongoing warfare. Interventions that can be put to use on site during perilous conditions and post-trauma are also presented for groups, including work with children, adolescents, and adults and with special populations. Flood Warning, Forecasting and Emergency Response
Sep 03 2021 Recent flood events in Europe, the USA and elsewhere have shown the devastating impact that flooding can have on people and property. Flood warning and forecasting systems provide a well-established way to help to reduce the effects of flooding by allowing people to be evacuated from areas at risk, and for measures to be taken to reduce damage to property. With sufficient warning, temporary defences (sandbags, flood gates etc) can also be installed, and river control structures operated to mitigate the effects of flooding. Many countries and local authorities now operate some form of flood warning system, and the underlying technology requires knowledge across a range of

technical areas, including rainfall and tidal detection systems, river and coastal flood forecasting models, flood warning dissemination systems, and emergency response procedures. This book provides a comprehensive account of the flood forecasting, warning and emergency response process, including techniques for predicting the development of flood events, and for issuing appropriate warnings. Related topics, such as telemetry and information systems, and flood warning economics, are also discussed. For perhaps the first time, this book brings together in a single volume the many strands of this interesting multidisciplinary topic, and will serve as a reference for researchers, policy makers and engineers. The material on meteorological, hydrological and coastal modelling and monitoring may also be of interest to a wider audience.

He explains his original research on command decisions and the barriers that challenge a commander's situational awareness, and offers lessons learned and best practices that can assist responders in
