Human and Machine Rights Sep 11 2021 Patent protection under the European Patent Convention (EPC) is not available for all issues. The intuitive colloquial meaning of the terms "invention" and "technical" often differs from the legal interpretation given in case-law decisions. Many of the current patent disputes among the players in the smartphone and portable-device market are based on issues relating to graphical user interfaces (GUIs), which allow the user to interact and interface with these devices. Furthermore, practitioners often have concerns regarding the filing of trivial patent applications in this and related computer-implemented fields. "Human and Machine Rights" seeks to place these issues in the light of the case law of the European Patent Office. Assisted by a Socratic dialogue between two forgotten computers, Master and Flip-flop, part I of "Human and Machine Rights" leads the reader through a systematised reading of EPO case law, looking for the conceptual framework underlying the boundaries of the exclusions from patentability for technicality reasons (in particular those relating to GUIs and gestural systems). The intention is to explicitly set out a praxis-oriented criterion, thus allowing practitioners to anticipate whether or not patent protection is available for a specific subject-matter, and to determine where the risks of trivial patent applications lie. Leaving behind the traditional classification of decisions according to the areas of activity relating to the respective inventions, "Human and Machine Rights" develops a new conceptual categorisation of the issues under discussion in the decisions, departing from the problems solved or the aims achieved by the inventions. A Human-Machine-Interface (HMI) model is used for this purpose. This categorisation automatically leads to a differentiation between the main trend of the decisions and the possible dissonant voices, thus contributing to increased harmonisation in the way inventions are dealt with. Drawing on twenty years of experience in helping engineers, scientists, and business people develop powerful communication skills, PERC Communications founders Peter and Cheryl Reimold present an easy-to-follow program for crafting winning presentations. They focus on two principles: 1) find a message that is clearly meaningful and accessible to your audience, and 2) connect strongly with your audience throughout your presentation. In applying these principles to a series of step-by-step preparations and on-stage actions, the authors help speakers focus on their most vital content, strengthen their structure and delivery, andâ??perhaps, most importantâ??eliminate stress and aggravation. Chapter topics in this reader-friendly guide include: Structuring your message for maximum effect Preparing effective visuals Understanding and using body language and eye contact Handling tough questions and surprises Making smart use of slide shows and presentation software Conducting Web presentations and Web meetings Timeless speaking tips are combined with up-to-date primers on the latest technology throughout. Advanced Systems-Level Problem Solving, Volume 1 Sep 04 2023 This three-volume set introduces the practice of advanced, 'dialectical' systems-level problem solving in both the social and natural sciences. In social science, it opens new vistas regarding organizational, strategy, and work design. In the natural sciences, it provides heretofore missing conceptions of physical systems in peril due to the climate crisis. In addition, the author draws conclusions that are important for advancing generative AI. The monograph presents novel conceptual tools that directly impact the internal structure of a systems analyst's mental processing in real time. While the first volume lays the theoretical groundwork for dialectical systems analysis, the second, focusing on the nature of work, lays bare the structure of complex thinking in terms of the 'thought forms' it requires. In order to facilitate better understanding of the principles taught in the first two volumes, the third volume provides a Manual of Dialectical Thought Forms, which is the only one in

existence today.

The Economics of Attention Apr 30 2023 If economics is about the allocation of resources, then what is the most precious resource in our new information economy? Certainly not information, for we are drowning in it. No, what we are short of is the attention to make sense of that information. With all the verve and erudition that have established his earlier books as classics, Richard A. Lanham here traces our epochal move from an economy of things and objects to an economy of attention. According to Lanham, the central commodity in our new age of information is not stuff but style, for style is what competes for our attention amidst the din and deluge of new media. In such a world, intellectual property will become more central to the economy than real property, while the arts and letters will grow to be more crucial than engineering, the physical sciences, and indeed economics as conventionally practiced. For Lanham, the arts and letters are the disciplines that study how human attention is allocated and how cultural capital is created and traded. In an economy of attention, style and substance change places. The new attention economy, therefore, will anoint a new set of moguls in the business world—not the CEOs or fund managers of yesteryear, but new masters of attention with a grounding in the humanities and liberal arts. Lanham's *The Electronic Word* was one of the earliest and most influential books on new electronic culture. *The Economics of Attention* builds on the best insights of that seminal book to map the new frontier that information technologies have created.
