This book provides a complete overview of motivation and emotion. Well-grounded in the history of the field, the fourth edition of Motivation: Biological, Psychological, and Environmental combines classic studies with current research. The material draws on topics that are familiar to students while maintaining a conversational tone to sustain student interest. "A rich guide

for understanding the evolving research landscape in psychology, including changes to core research ethics concepts such as informed consent, privacy, and risk of harm. This handbook offers a thorough and authoritative discussion of the ethical issues in conducting research with human participants. Each chapter poses an important ethical question, considers the relevant factors for addressing the question, and presents guidance for investigators. Topics include: informed consent, deception, risk/benefit ratio, data security, authorship, conflicts of interest, fairness and equity when collaborating with researchers in resource-poor settings, and more. While psychological research with humans still takes place in the investigator's laboratory and field, there is an increasing trend toward multiple investigators and interdisciplinary research projects owing to the complexity of modern research questions. Furthermore, technology has changed dramatically and affects all psychological researchers, whether they are working individually or in large teams. With its comprehensive scope and practical guidance, this book will serve as an invaluable aid to understanding and navigating the ethical challenges that confront new and seasoned researchers alike"-- The chapters in this volume are the edited versions of invited addresses to the XXVI International Congress of Psychology held in Montréal in August 1996. As one major goal of the Congress was to promote communication among specializations in scientific psychology, the speakers were asked to survey their research area and present their own work in a way that would be accessible to their colleagues in other areas. Another purpose of the meeting was to bring researchers together from different parts of the world, reflecting their different approaches to the scientific study of mind, brain, and behavior. Consequently, the eminent researchers who have written the twenty-six chapters included in the present volume were drawn from universities and research institutes in North America, Europe, Japan, Russia, Israel, and New Zealand. The chapters cover a range of topics in human and animal experimental psychology. The first section deals with psychobiological processes - the interplay of body and mind in determining intelligence, stress, and pain. The next five chapters address current issues in neuropsychology and neuroscience, including the neural correlates of attention and vision. A third section looks at learning processes in humans and animals, and a fourth deals with a range of topics in perception and cognition. The final five chapters take a developmental perspective, presenting theoretical and empirical analyses of the acquisition of perceptual and cognitive abilities. Overall, the collection illustrates the growing trend to break down traditional barriers between areas of experimental psychology; there are many instances of profitable interactions between researchers studying aspects of behavior and those studying the biological bases of these behaviors. The twenty-six chapters give an excellent overview of current research in scientific psychology. The most contemporary and relevant introduction to the field, *Cultural Psychology, Fourth Edition*, is unmatched in both its presentation of current, global experimental research and its focus on helping students to think like cultural psychologists. Inclusive and research-based content, assessment, and teaching tools by a master teacher This book will be an ally for teachers striving to ignite a passion in their students for psychology's many relevant findings, and for students wanting to satisfy a growing curiosity about themselves, their families, their friends, and the world of people around them. Well-known for its pioneering focus on the development of critical thinking skills crucial to students' success in university and in later life, *Psychology* by Wade, Tavris, Saucier and Elias is also widely regarded for the liveliness, warmth, and clarity of its writing style. Continuing its tradition of integrating gender, culture, and ethnicity throughout the text, *Psychology* provides a comprehensive introduction to the field. Using research in clinical, cognitive, developmental, and social psychology, *Forensic and Legal Psychology* shows how psychological science can enhance the gathering and presentation of evidence, improve legal decision-making, prevent crime, rehabilitate criminals, and promote justice. Although the emphasis is on psychological research, the textbook makes extensive use of actual cases and real trials to engage students and to illustrate the relevance of research findings. Written in a clear, student-friendly style, *Forensic and Legal Psychology* is designed for both the psychology and law AND forensic psychology class.
