Introduction

Terrorism is an issue that has had states, nations and counties at risk of losing essential people, information and other valuable things defined in every country. Terrorism can be described as illegal employment of force, or any form of violence against property or people to strike intimidation to the citizens or the government for specific social or political objectives. Terrorism varies in scale from domestic or national to international. Domestic terrorism is committed within a country, whereas international terrorism takes place and is executed by foreign groups of governments, and this form of terrorism can occur in any place across the world.

Cyber terrorism refers to the use of a computer and its network tools to stop or cause harm to the infrastructures of a nation or country. Such infrastructure includes but is not limited to transportation, health care, energy, and other government operations. The rise of cyber terrorism in many countries, including the United States lies in the fact that these countries depend on computer networks in many of their operations. This paper explains the reasons for the choice of cyber terrorism by terrorists, discusses vulnerabilities associated with cyber terrorism, effects that arise due to cyber terrorism and a way out of cyber terrorism.

Why Cyber Terrorism?

Terrorists get attracted to cyber terrorism due to many reasons. Cyber terrorism is inexpensive compared to conventional ways of committing a terrorist attack. Cyber terrorism takes terrorist fundamental requirements, which are a personal computer and an internet (online connection). It does not involve the use of weapons like explosives and guns that demand terrorists their money to buy, but it only consists of delivering viruses into an intended network, computer devices or other technologies such as telephone lines, wireless connection or cables.

Anonymity attached to this form of terrorism makes it more welcoming to terrorists. Since terrorists use the internet, they create a false username and access websites using "guest user." It makes it hard for security agencies to track their activities on these websites. Since no physical barriers like checkpoints in the cyberspace, it becomes difficult to stop cyber activities to make the desired effect on targeted websites or networks.

even more lethal forms Policymakers and the scientific community at large must put forth a vigorous and immediate response to this challenge This new book by the National Research Council recommends that the government expand existing regulations and rely on self governance by scientists rather than adopt intrusive new policies One key recommendation of the report is that the government should not attempt to regulate scientific publishing but should trust scientists and journals to screen their papers for security risks a task some journals have already taken up With biological information and tools widely distributed regulating only U S researchers would have little effect A new International Forum on Biosecurity should encourage the adoption of similar measures around the world Seven types of risky studies would require approval by the Institutional Biosafety Committees that already oversee recombinant DNA research at some 400 U S institutions These experiments of concern include making an infectious agent more lethal and rendering vaccines powerless Psychology of Terrorism, 2007 In compiling this annotated bibliography on the psychology of terrorism the author has defined terrorism as acts of violence intentionally perpetrated on civilian noncombatants with the goal of furthering some ideological religious or political objective The principal focus is on nonstate actors The task was to identify and analyze the scientific and professional social science literature pertaining to the psychological and or behavioral dimensions of terrorist behavior not on victimization or effects The objectives were to explore what questions pertaining to terrorist groups and behavior had been asked by social science researchers to identify the main findings from that research and attempt to distill and summarize them within a framework of operationally relevant questions To identify the relevant social science literature the author began by searching a series of major academic databases using a systematic iterative keyword strategy mapping where possible onto existing subject headings The focus was on locating professional social science literature published in major books or in peer reviewed journals Searches were conducted of the following databases October 2003 Sociofile Sociological Abstracts Criminal Justice Abstracts CJ Abstracts Criminal Justice Periodical Index CJPI National Criminal Justice Reference Service Abstracts NCJRS PsycInfo Medline and Public Affairs Information Service PAIS Three types of annotations were provided for works in this bibliography Author s Abstract this is the abstract of the work as provided and often published by the author Editor s Annotation this is an annotation written by the editor of this bibliography and Key Quote Summary this is an annotation composed of key quotes from the original work edited to provide a cogent overview of its main points **Dying to Win** Robert Pape, 2006-07-25 Includes a new Afterword Finalist for the Council on Foreign Relations Arthur Ross Book Award One of the world s foremost authorities on the subject of suicide terrorism the esteemed political scientist Robert Pape has created the first comprehensive database of every suicide terrorist attack in the world from 1980 until today In Dying to Win Pape provides a groundbreaking demographic profile of modern suicide terrorist attackers and his findings offer a powerful counterpoint to what we now accept as conventional wisdom on the topic He also examines the early practitioners of this guerrilla tactic including the ancient Jewish Zealots who in A D 66 wished to liberate

effectiveness Relying on quantitative analysis of original data on international PMSCs involvement in civil wars from 1990 2008 and PMSCs human rights and fraud violations in Iraq from 2004 2019 the book investigates how local and global competition impact accountability of these non state actors and their contribution to the termination of major and minor wars
