Telefone sem fio Jun 01 2023 Ilan Brenman não tirava da cabeça a cena de um grupo de crianças e adultos falando um no ouvido do outro, ao brincar de telefone sem fio, e as variadas expressões - de curiosidade, alegria, estranheza - que cada um fazia ao ouvir o cochicho. Imaginou essas caras todas nos mais diferentes personagens de histórias infantis - arlequins, reis, piratas, papagaios, turistas, o Lobo Mau, a Chapeuzinho. Wireless Phones and Health II Mar 10 2024 From the time questions about the impact of wireless technology on public health were first raised in 1993 through the present, Wireless Technology Research, LLC (WTR) has been the largest independent surveillance and research program trying to identify and solve human health problems associated with wireless phones. In 1995 at the University "La Sapienza" of Rome, WTR sponsored the first comprehensive forum for the discussion of these issues. Papers from the 1995 State of the Science Colloquium were collected and published in Volume I of this series, Wireless Phones and Health: Scientific Progress. This second volume assembles papers presented at WTR's Second State of the Science Colloquium in Long Beach, CA, in June 1999; it contains the most comprehensive research on the public health impact of wireless phones to date. The operating words for the proper understanding of these data are science and public health. Science is a tool for making public health decisions, but the framework in which we are operating is truly that of public health. We are looking for problems that have to do with wireless technology. We are trying to decide how this technology impacts on the public for one purpose and one purpose alone, and that purpose is to solve problems that are identified. I would like to challenge you, the reader, to suspend your parochial orientation as you consider these latest findings.

Mobile and Wireless Networks May 20 2022 This book presents the state of the art in the field of mobile and wireless networks, and anticipates the arrival of new standards and architectures. It focuses on wireless networks, starting with small personal area networks and progressing onto the very large cells of wireless regional area networks, via local area networks dominated by WiFi technology, and finally metropolitan networks. After a description of the existing 2G and 3G standards, with LTE being the latest release, LTE-A is addressed, which is the first 4G release, and a first indication of 5G is provided as seen through the standardizing bodies. 4G technology is described in detail along with the different LTE extensions related to the massive arrival of femtocells, the increase to a 1 Gbps capacity, and relay techniques. 5G is also discussed in order to show what can be expected in the near future. The Internet of Things is explained in a specific chapter due to its omnipresence in the literature, ad hoc and mesh networks form another important chapter as they have made a comeback after a long period of near hibernation, and the final chapter discusses a particularly recent topic: Mobile-Edge Computing (MEC) servers.

Por que o mundo não existe Dec 15 2021 Esta obra apresenta uma visão sobre o mundo, abordando pensadores como Hegel, Schelling e Wittgenstein, mas também ponderando a existência de unicórnios no lado oculto da lua, os Simpsons e Lars Von Trier. O autor, o mais jovem professor de filosofia da Alemanha e uma estrela em ascensão em sua área, toma em consideração uma das questões mais atordoadas da humanidade. Segundo ele, a filosofia tem considerado a possibilidade de o mundo não existir por milênios, e se pergunta se alguém algum dia entendeu o que esse conceito quer dizer. Divertindo-se com elocubrações, jogos de palavras e ideias provocativas, Gabriel explica que enquanto não há nada no mundo que não exista, o mundo é incompleto. Uma generosa pitada de humor ajuda nessa jornada ao fundo da existência humana.

Religion, Religious Organisations and Development Apr 11 2024 This collection adds to a burgeoning literature concerned with the roles played by religions in development. The authors do not assume that religion and religious organisations can be 'used' to achieve development objectives, or that religiously inspired development work is more holistic, transformative and authentic. Instead, they subject such assumptions to critical and (as far as possible) objective scrutiny, focusing on how adherents of several religious traditions and a variety of organisations affiliated with different religions perceive the idea of development and attempt to contribute to its objectives. Geographically, chapters in the volume encompass Africa, South Asia and the Asia-Pacific. Four of the papers have an international focus: providing a preliminary framework for analysing the role of religion in development, considering the roles played by faith-inspired organisations in two regions (the Asia Pacific and Sub-Saharan Africa) and analysing transnational Muslim NGOs. The individual case studies focus on nine countries (India, Kenya, Pakistan, Nigeria, Tanzania, Sudan, Malawi, Sri Lanka, South Africa), consider four religions (Islam, Hinduism, Christianity, Buddhism), and can be grouped under four themes: they consider religion, wellbeing and inequality; the roles of religious NGOs in development; whether and how religious organisations influence, respond to or resist social change; and whether religious service providers reach the poor. Finally, practice notes show how three religious development organisations try to put their principles into practice. This book was published as a special double issue of Development in Practice.

Wireless and Mobile Communications Aug 23 2022 In October 1993, the Rutgers University Wireless Information Network Laboratory hosted the fourth WINLAB Workshop on Third Generation Wireless Information Networks. These events bring together a select group of experts interested in the long term future of Personal Communications, Mobile Computing, and other services supported by wireless telecommunications technology. This is a fast moving field and we already see, in present practice, realizations of visions articulated in the earlier Workshops. In particular, the second generation systems that absorbed the attention of the first WINLAB Workshop, are now commercial products. It is an interesting reflection on the state of knowledge of wireless communications that the debates about the relative technical merits of these systems have not yet been resolved. Meanwhile, in the light of United States Government announcements in September 1993 the business and technical communities must confront this year a new generation of Personal Communications Services. Here we have applications in search of the best technologies rather than the reverse. This is a rare situation in the information business. Today's advanced planning and forward looking studies will prevent technology shortages and uncertainties at the end of this decade. By then, market size and public expectations will surpass the capabilities of the systems of the mid-1990's. Third Generation Wireless Information Networks will place greater burdens on technology than their predecessors by offering a wider range of services and a higher degree of service integration.

It identifies the major trends, discusses the main claims made about the mobile age, and looks at issues which affect design, usability and evaluation. This unique look at the mobile age provides many interesting and important insights and will appeal to anyone designing, testing, or studying mobile devices.
