Children learn in contexts, and the spaces, places and people they come into contact with have a deep influence on their development. Urie Bronfenbrenner's bioecological model of development places the child at the centre of this complex network, and his influence has been extensive in early childhood education. This book presents an introduction to Bronfenbrenner's model of development, drawing on practice-based research to identify and animate key elements of his model's impact. It illustrates how his model can help bring quality to early learning environments and incorporates it into daily work with young children. As well as providing a glossary of key terms, Introducing Bronfenbrenner covers areas such as: a bioecological perspective on educational transition; early education as a dynamic process; nurturing children's learning and development; reflecting the bioecological in early years practice. Using a variety of vignettes, practical examples of good practice and case studies, Introducing Bronfenbrenner is an essential guide to his work. It will be of interest to professionals working with children in early childhood settings and to undergraduate students training to become early childhood professionals. Research Methods for Early Childhood Education takes an international perspective on research design, and illustrates how research methods are inextricably linked to cultural and theoretical understandings of early childhood, young children's competences and the purposes of education. The book offers a critical and reflective approach to established and innovative research methods in early childhood education, making links between diverse methodologies, methods and theory, with illustrative examples of research in practice. Each chapter addresses a specific methodological approach, linking the methodology to early childhood education with vignettes as examples of research practice in the global north, south, east and west, offering practical examples and critical thinking around new theoretical understandings of early childhood across geographical and cultural contexts. The book critically examines: - the role of the researcher - conceptualisations of how research is undertaken; - the often sensitive nature of conducting research with young children; - how early childhood education is understood; - how young children can be included as active research participants. Throughout, the book emphasises ethical and methodological issues that arise from undertaking research in mono-cultural and cross-cultural contexts. Annotated further reading lists provide a selection of seminal and recent studies that have adopted each methodological approach. You're probably thinking this is just another typical study guide.
