[Children Solving Problems](#) Stephanie THORNTON, Stephanie Thornton, 2009-06-30 A one year old attempting to build a tower of blocks may bring the pile crashing down yet her five year old sister accomplishes this task with ease Why do young children have difficulty with problems that present no real challenge to older children How do problem solving skills develop In [Children Solving Problems](#) Stephanie Thornton surveys recent research from a broad range of perspectives in order to explore this important question What Thornton finds may come as a surprise successful problem solving depends less on how smart we are or as the pioneering psychologist Jean Piaget claimed how advanced our skill in logical reasoning is and more on the factual knowledge we acquire as we learn and interpret cues from the world around us Problem solving skills evolve through experience and dynamic interaction with a problem But equally important as the Russian psychologist L S Vygotsky proposed is social interaction Successful problem solving is a social process Sharing problem solving tasks with skilled adults and with other children is vital to a child's growth in expertise and confidence In problem solving confidence can be more important than skill In a real sense problem solving lies at the heart of what we mean by intelligence The ability to identify a goal to work out how to achieve it and to carry out that plan is the essence of every intelligent activity Could it be Thornton suggests that problem solving processes provide the fundamental machinery for cognitive development In [Children Solving Problems](#) she synthesizes the dramatic insights and findings of post Piagetian research and sets the agenda for the next stage in understanding the varied phenomena of children's problem solving
