

RESEARCH PAPER INTRODUCTION SAMPLE

INTRODUCTION

The controversy involving melamine which started during the last part of the 2008 brought the attention of the people back to different debates between the benefits offered by breastfeeding, and the use of substitutes for breast milk, such as commercial infant formula. This was not the very first time that these infant formula has resulted to illnesses, even deaths to several infants all over the world. As such, the continuous campaign introduced by UNICEF and the World Health Organization (WHO) together with other advocates of breastfeeding, for mothers to breastfed their babies at least until they reach 6 months old.

Practices involved in infant feeding generally involves meeting the immunological and nutritional requirements of a baby. A study involving feeding practices for infants was performed out of a sample of 100 pairs of mothers and their infants. The results have shown that only 20% of the mothers exclusively breastfeed their babies. This only reveals that socio-economic factors such as the work status, educational attainment and marital status of a mother had direct impact on these practices.

Mothers who are employed have the tendency to stop breastfeeding their babies, eventually resorting to the use of infant formula for feeding as they need to go back to work. This study also revealed that married mothers, and living with their spouse are more likely to breastfeed their babies compared to single mothers.

Also, mothers who have higher educational attainment often end up choosing formula feeding, or mixed feeding, in comparison to those with lower educational attainment. For these reasons, health care professionals continue to influence their mothers everything when it comes to decisions involved in feeding infants.

Why They Can't Write John Warner, 2018-12-03 An important challenge to what currently masquerades as conventional wisdom regarding the teaching of writing There seems to be widespread agreement that when it comes to the writing skills of college students we are in the midst of a crisis In *Why They Can't Write* John Warner who taught writing at the college level for two decades argues that the problem isn't caused by a lack of rigor or smartphones or some generational character defect Instead he asserts we're teaching writing wrong Warner blames this on decades of educational reform rooted in standardization assessments and accountability We have done no more Warner argues than conditioned students to perform writing related simulations which pass temporary muster but do little to help students develop their writing abilities This style of teaching has made students passive and disengaged Worse yet it hasn't prepared them for writing in the college classroom Rather than making choices and thinking critically as writers must undergraduates simply follow the rules such as the five paragraph essay designed to help them pass these high stakes assessments In *Why They Can't Write* Warner has crafted both a diagnosis for what ails us and a blueprint for fixing a broken system Combining current knowledge of what works in teaching and learning with the most enduring philosophies of classical education this book challenges readers to develop the skills attitudes knowledge and habits of mind of strong writers
