Wolsey, 2009-11-06 In 1958, Ralph E. Gomory transformed the field of integer programming when he published a paper that described a cutting plane algorithm for pure integer programs and announced that the method could be refined to give a finite algorithm for integer programming. In 2008, to commemorate the anniversary of this seminal paper, a special workshop celebrating fifty years of integer programming was held in Aussois, France, as part of the 12th Combinatorial Optimization Workshop. It contains reprints of key historical articles and written versions of survey lectures on six of the hottest topics in the field by distinguished members of the integer programming community. Useful for anyone in mathematics, computer science, and operations research, this book exposes mathematical optimization, specifically integer programming and combinatorial optimization, to a broad audience.
